DETAILED CORROSION INSPECTION CURATIVE AND PREVENTIVE TREATMENT

1. General

This is a detailed visual inspection of the skin/structure assembly, carried out to ensure that no corrosion has developed in areas not inspected during previous scheduled maintenance operations.

The inspection is performed in four parts:

- External fuselage inspection.
This is carried out on the skin, lower section of fuselage under wing-to-fuselage fairing and stub and requires that the A/C be cleaned.
- The older paint schemes (e.g. 4080 paint scheme) are subject to microcracks. Paint stripping is recommended for a more reliable corrosion check.
- Internal fuselage inspection.
This is carried out on the structure and requires the removal of cabin fittings and trim, insulating mats and floor panels. On some aircraft, the inside of the fuselage skin includes self-adhesive insulating foam with metallic strip which must also be removed in all the areas to be inspected.
- Wing inspection.
This is carried out on the wings, on the moving surfaces (slats, ailerons, airbrakes) and the gear wells.
- Stabilizer inspection.
This is carried out on the vertical stabilizer box and horizontal stabilizer with the stabilizers removed.

Prior to any inspection/check the area to be checked must be cleaned.

Any anomaly detected (corrosion, cracks, defective rivets) must be repaired in accordance with procedures laid out in the structure chapters of the Maintenance and Repair Manuals.

If there is any doubt as to the condition of an area which cannot easily be reached adjacent components should be removed so that it can be checked thoroughly.

Once check is completed, the aforementioned areas and anywhere else it might be necessary should be repainted according to instructions given in the Structural Repair Manual.

All exposed parts should be sprayed with a preventive water-repellent treatment.

A protective bead of PR1436G is to be applied to each end of all tightened bushings accessible during inspection.

NOTE: Following this inspection, a report is to be made to the manufacturer stating the anomalies detected and the repair procedures applied, if appropriate.

A. Aircraft configuration

- Preferably on jacks.
- Skin panels stripped as required.
- Nose and tail cones removed.
- Stabilizers removed.
- All floor panels removed between frames 0 and 23 as well as mats under floor panels and the self-adhesive insulating foam with metallic strip, if installed on aircraft.
- Between frames 0 and 20, above the floor panels, remove the self-adhesive insulating foam from a web sample representing about 10% of the whole, paying special attention to the following areas:
 - below emergency exits,
 - around cabin windows,
 - around access doors,
 - some webs taken at random, preferably in areas of possible condensation.
- All insulating mats and the self-adhesive insulating foam with metallic strip, if installed on aircraft removed between frames 20 and 23 around fuselage and front face of frame 23.
