Data Driven Controller Design The H2 Approach Communications And Control Engineering:

Data-Driven Controller Design Alexandre Sanfelice Bazanella, Lucíola Campestrini, Diego Eckhard, 2011-11-16 Data Based Controller Design presents a comprehensive analysis of data based control design It brings together the different data based design methods that have been presented in the literature since the late 1990 s To the best knowledge of the author these data based design methods have never been collected in a single text analyzed in depth or compared to each other and this severely limits their widespread application In this book these methods will be presented under a common theoretical framework which fits also a large family of adaptive control methods the MRAC Model Reference Adaptive Control methods This common theoretical framework has been developed and presented very recently The book is primarily intended for PhD students and researchers senior or junior in control systems It should serve as teaching material for data based and adaptive control courses at the graduate level as well as for reference material for PhD theses It should also be useful for advanced engineers willing to apply data based design As a matter of fact the concepts in this book are being used under the author s supervision for developing new software products in a automation company The book will present simulation examples along the text Practical applications of the concepts and methodologies will be presented in a specific chapter *Mechanical Engineering And Control Systems - Proceedings Of 2015 International Conference (Mecs2015)* Xiaolong Li, 2016-01-15 This book consists of 113 selected papers presented at the 2015 International Conference on Mechanical Engineering and Control Systems MECS2015 which was held in Wuhan China during January 23 25 2015 All accepted papers have been subjected to strict peer review by two to four expert referees and selected based on originality ability to test ideas and contribution to knowledge MECS2015 focuses on eight main areas namely Mechanical Engineering Automation Computer Networks Signal Processing Pattern Recognition and Artificial Intelligence Electrical Engineering Material Engineering and System Design The conference provided an opportunity for researchers to exchange ideas and application experiences and to establish business or research relations finding global partners for future collaborations The conference program was extremely rich profound and featured high impact presentations of selected papers and additional late breaking contributions
