Rouse, Andrew P. Sage, 2007 This volume brings together several perspectives on the nature of work processes in enterprises and how information systems can best support these processes The genesis of this idea was the shared interests of the authors in how enterprises improve and change The shared belief is that change of enterprises relates to change of work processes and the success of such changes

relates to how work processes are supported by information systems Thus the papers in this volume address both the nature of work and the design of information systems to support work This volume is divided into two main sections work and workflow and information systems There are three papers in each section The disciplines represented across these six papers include management engineering computing and architecture These four disciplines pursue work workflow and information systems from quite different perspectives management to represent business practices and processes engineering to represent the physical flows in the system computing to represent the information flows and architecture to represent human flows within and among physical spaces Enterprises of course include all these types of flows

An Introduction to Information

Processing Harvey M. Dietel, Barbara Deitel, 2014-06-28 An Introduction to Information Processing provides an informal introduction to the computer field This book introduces computer hardware which is the actual computing equipment Organized into three parts encompassing 12 chapters this book begins with an overview of the evolution of personal

computing and includes detailed case studies on two of the most essential personal computers for the 1980s namely the IBM Personal Computer and Apple's Macintosh This text then traces the evolution of modern computing systems from the earliest mechanical calculating devices to microchips Other chapters consider the components and operation of typical data communications systems This book discusses as well the various types of communications networks and communications via space satellites The final chapter deals with software or computer programs the sets of instructions that programmers write to inform the computer how to solve particular problems This book is a valuable resource for computer specialists

mathematicians and computer programmers **Grid and Cooperative Computing** Minglu Li,Xian-He Sun,Qianni Deng,Jun Ni,2004-04-20 Grid and cooperative computing has emerged as a new frontier of information technology It aims to share and coordinate distributed and heterogeneous network resources

for better performance and functionality that can otherwise not be achieved This volume contains the papers presented at the 2nd International Workshop on Grid and Cooperative Computing GCC 2003 which was held in Shanghai P R China during December 7-10 2003 GCC is designed to serve as a forum to present current and future work as well as to exchange research ideas among researchers developers practitioners and users in Grid computing Webservices and cooperative computing including theory and applications For this workshop we received over 550 paper submissions from 22 countries and regions All the papers were peer reviewed in depth and qualitatively graded on their relevance originality significance presentation and the overall appropriateness of their acceptance Any concerns raised were discussed by the program committee The organizing committee selected 176 papers for conference presentation full papers and 173 submissions for poster presentation short papers The papers included herein represent the forefront of research from China USA UK Canada Switzerland Japan Australia India Korea Singapore Brazil Norway Greece Iran Turkey Oman Pakistan and other countries More than 600 attendees participated in the technical section and the exhibition of the workshop Documenting Software Architectures

Paul Clements,Felix Bachmann,Len Bass,David Garlan,James Ivers,Reed Little,Paulo Merson,Robert Nord,Judith Stafford,2010-10-05 Software architecture the conceptual glue that holds every phase of a project together for its many stakeholders is widely recognized as a critical element in modern software development Practitioners have increasingly discovered that close attention to a software system's architecture pays valuable dividends Without an architecture that is appropriate for the problem being solved a project will stumble along or most likely fail Even with a superb architecture if that architecture is not well understood or well communicated the project is unlikely to succeed Documenting Software Architectures Second Edition provides the most complete and current guidance independent of language or notation on how to capture an architecture in a commonly understandable form Drawing on their extensive experience the authors first help you decide what information to document and then with guidelines and examples in various notations including UML show you how to express an architecture so that others can successfully build use and maintain a system from it The book features

rules for sound documentation the goals and strategies of documentation architectural views and styles documentation for software interfaces and software behavior and templates for capturing and organizing information to generate a coherent package New and improved in this second edition Coverage of architectural styles such as service oriented architectures multi tier architectures and data models Guidance for documentation in an Agile development environment Deeper treatment of documentation of rationale reflecting best industrial practices Improved templates reflecting years of use and feedback and more documentation layout options A new comprehensive example available online featuring documentation of a Web based service oriented system Reference guides for three important architecture documentation languages UML AADL and SySML
