New Trends in Databases and Information Systems Mārīte Kirikova, Kjetil Nørnvåg, George A. Papadopoulos, Johann Gamper, Robert Wrembel, Jérôme Darmont, Stefano Rizzi, 2017-09-08 This book constitutes the thoroughly refereed short papers workshops and doctoral consortium papers of the 21th European Conference on Advances in Databases and Information Systems ADBIS 2017 held in Nicosia Cyprus in September 2017 The 25 full and 4 short workshop papers and the 12 short papers of the main conference were carefully reviewed and selected from 160 submissions The papers from the following workshops have been included in the proceedings the first workshop on Data Driven Approaches for Analyzing and Managing Scholarly Data AMSD 2017 the first workshop on Novel Techniques for Integrating Big Data BigNovelTI 2017 the first international workshop on Data Science Methodologies and Use Cases DaS 2017 the second international workshop on Semantic Web for Cultural Heritage SW4CH 2017

Data Fusion: Concepts and Ideas H B Mitchell, 2012-02-09 This textbook provides a comprehensive introduction to the concepts and idea of multisensor data fusion It is an extensively revised second edition of the author s successful book Multi Sensor Data Fusion An Introduction which was originally published by Springer Verlag in 2007 The main changes in the new book are New Material Apart from one new chapter there are approximately 30 new sections 50 new examples and 100 new references At the same time material which is out of date has been eliminated and the remaining text has been rewritten for added clarity Altogether the new book is nearly 70 pages longer than the original book Matlab code Where appropriate we have given details of Matlab code which may be downloaded from the worldwide web In a few places where such code is not readily available we have included Matlab code in the body of the text Layout The layout and typography has been revised Examples and Matlab code now appear on a gray background for easy identification and advanced material is marked with an asterisk The book is intended to be self contained No previous knowledge of multi sensor data fusion is assumed although some familiarity with the basic tools of linear algebra calculus and simple probability is recommended Although conceptually simple the study of multi sensor data fusion presents challenges that are unique within the education of the electrical engineer or computer scientist To become competent in the field the student must become familiar with tools taken from a wide range of diverse subjects including neural networks signal processing statistical estimation tracking algorithms computer vision and control theory All too often the student views multi sensor data fusion as a miscellaneous assortment of different processes which bear no relationship to each other In contrast in this book the processes are unified by using a common statistical framework As a consequence the underlying pattern of relationships that exists between the different methodologies is made evident The book is illustrated with many real life examples taken from a diverse range of applications and contains an extensive list of modern references

Sleep Spindles: Breaking the Methodological Wall Christian O'Reilly, Simon C. Warby, Tore Nielsen, 2017-03-07 In the last decade sleep spindles have attracted steadily increasing attention This interest is motivated by the many intriguing relationships

between spindles and various diseases e g schizophrenia Parkinson Alzheimer autism mental retardation recovery processes e g post brain stroke and cognitive faculties e g memory consolidation intelligence dream recall sleep preservation

Nonetheless a methodological wall has impeded the study of sleep spindles Their investigation rests heavily on our ability to reliably and consistently identify spindle patterns from background EEG activity a task involving many obstacles including a fuzzy definition of spindles low inter expert agreement on their scoring lack of consensus on standard techniques for their automated detection low reproducibility of observed characteristics and correlates unavailability of large standardized high quality databases and inconsistencies in the methods used to evaluate the performance of automated detectors The primary aims of this research topic were to bring together world class researchers on a project designed to facilitate exchanges on methodological difficulties encountered in assessing sleep spindles and to promote standardized spindle related resources In preparing their contributions authors were encouraged to use existing or to propose new publicly available resources for assessing sleep spindles To allow fair and accurate comparison of reported results the authors were also encouraged to validate their tools on a common benchmark A database containing expert spindle scoring i e the Montreal Archive of Sleep Studies was made publicly available for that purpose

Data Fusion Mathematics Jitendra R. Raol, S. Sethu Selvi, Sudesh Kumar Kashyap, Ailneni Sanketh, 2025 Data Fusion Mathematics Theory and Practice offers a comprehensive overview of data fusion DF and provides a proper and adequate understanding of the basic mathematics directly related to DF The new edition offers updated chapters alongside four brand new chapters that are based on recent research carried out by the authors including topics on machine learning techniques target localisation using a network of 2D ground radar thermal imaging sensors for multi target angle only tracking and multisensor data fusion for single platform and team platforms This book also covers major mathematical expressions formulae and equations and where feasible their derivations It discusses signed distance function concepts DF models and architectures aspects and methods of type 1 and 2 fuzzy logics and related practical applications In addition the authors cover soft computing paradigms that are finding increasing applications in multisensory DF approaches and applications This text is geared toward researchers scientists teachers and practicing engineers interested and working in the multisensor data fusion area Provided by publisher

Distributed Data Fusion for Network-centric Operations David Lee Hall, 2013 Foreword I am very pleased to provide a foreword for this timely work on distributed fusion I have been involved in fusion research for the last 15 years focused on transforming data to support more effective decision making During that time I have relied heavily on the advice of the editors of this book and many of the chapter authors to help set the directions for Army focused basic and applied information fusion initiatives I first met the editors about 12 years ago at an Army sponsored fusion workshop where it was clear that the issues of increased sensors and data sources along with the introduction of web based information architectures had finally overwhelmed the analysis community Most of the discussions were focused on the problems But Dave Hall and Jim Llinas began addressing the

solutions They identified relevant terms and definitions outlined algorithms for specific fusion tasks addressed many of the evolving architectural issues pinpointed key technical barriers and proposed directions for future research They clearly were long time experts in the field but more importantly they were visionary in their recognition of rapidly evolving trends in information management and the impact those trends would have on the field of data fusion It is therefore not at all surprising that this their latest book along with colleagues would be focused on distributed fusion While there are numerous texts and handbooks on data fusion in general many written or edited by the editors and authors of this book there are two major trends that motivate the need for this work First the very concept of defense operations has dramatically changed Modern military missions include for example coalitionbased counterinsurgency counternarcotics

Data Fusion in Information Retrieval Shengli Wu, 2014-05-09 The technique of data fusion has been used extensively in information retrieval due to the complexity and diversity of tasks involved such as web and social networks legal enterprise and many others This book presents both a theoretical and empirical approach to data fusion Several typical data fusion algorithms are discussed analyzed and evaluated A reader will find answers to the following questions among others What are the key factors that affect the performance of data fusion algorithms significantly What conditions are favorable to data fusion algorithms CombSum and CombMNZ which one is better and why What is the rationale of using the linear combination method How can the best fusion option be found under any given circumstances
