Dimitri P. Bertsekas, Robert G. Gallager, 1993 *Power Aware Design Methodologies* Massoud Pedram, Jan M. Rabaey, 2007-05-08 *Power Aware Design Methodologies* was conceived as an effort to bring all aspects of power aware design methodologies together in a single document. It covers several layers of the design hierarchy from technology circuit logic and architectural levels up to the system layer. It includes discussion of techniques and methodologies for improving the power efficiency of CMOS circuits, digital and analog systems on chip, microelectronic systems, wirelessly networked systems of computational nodes and so on. In addition to providing an in depth analysis of the sources of power dissipation in VLSI circuits and systems and the technology and design trends, this book provides a myriad of state of the art approaches to power optimization and control. The different chapters of *Power Aware Design Methodologies* have been written by leading researchers and experts in their respective areas. Contributions are from both academia and industry. The contributors have reported the various technologies, methodologies and techniques in such a way that they are understandable and useful.

Wireless Sensor Networks Ibrahim M. M. El Emary, S. Ramakrishnan, 2013-08-28 Although there are many books available on WSNs, most are low level introductory books. The few available for advanced readers fail to convey the breadth of knowledge required for those aiming to develop next generation solutions for WSNs. Filling this void, *Wireless Sensor Networks: From Theory to Applications* supplies comprehensive coverage of WSNs. In order to provide the wide ranging guidance required, the book brings together the contributions of domain experts working in the various subfields of WSNs worldwide. This edited volume examines recent advances in WSN technologies and considers the theoretical problems in WSN including issues with monitoring, routing and power control. It also details methodologies that can provide solutions to these problems. The book's 25 chapters are divided into seven parts: Data Collection, Physical Layer and Interfacing, Routing and Transport Protocols, Energy Saving Approaches, Mobile and Multimedia WSN, Data Storage and Monitoring, Applications. The book examines applications of WSN across a range of fields including health, military, transportation and mining.

Addressing the main challenges in applying WSNs across all phases of our life it explains how WSNs can assist in community development Complete with a list of references at the end of each chapter this book is ideal for senior undergraduate and postgraduate students researchers scholars academics industrial researchers and practicing engineers working on WSNs The text assumes that readers possess a foundation in computer networks wireless communication and basic electronics

Production Factor Mathematics Martin Grötschel,Klaus Lucas,Volker Mehrmann,2010-08-05 Mathematics as a production factor or driving force for innovation Those who want to know and understand why mathematics is deeply involved in the design of products the layout of production processes and supply chains will find this book an indispensable and rich source Describing the interplay between mathematical and engineering sciences the book focusses on questions like How can mathematics improve to the improvement of technological processes and products What is happening already Where are the deficits What can we expect for the future 19 articles written by mixed teams of authors of engineering industry and mathematics offer a fascinating insight of the interaction between mathematics and engineering **1996 Fifth IEEE International Conference on Universal Personal Communications Record** ,1996 **Tactical Communications for the Digitized Battlefield** Michael J. Ryan,Michael R. Frater,2002 Traditional tactical communications systems consist of a number of separate subsystems with little interworking between them and with external sensors and weapons systems Combat net radio CNR has provided the high mobility communications required by combat troops while trunk communications systems have provided high capacity communications between headquarters at the expense of mobility The focus of this book is on new information age technologies that promise to offer seamless integration of real time data sharing creating a single logical network architecture to facilitate the movement of data throughout the battlespace Because the structure of this network is constrained by the fundamental trade off between range mobility and capacity that applies to all communications systems this network is unlikely to be based on a single network technology This book presents an architecture for this network and shows how its subsystems can be integrated to form a single logical network

amount of knowledge has been accumulated in this interplay of applied mathematics and computer science This book includes nineteen lengthy surveys of the state of the art of performance evaluation techniques and an extensive bibliography The topics include stochastic processes and queueing theory applied to performance analysis and performance models of computer systems and communication networks Articles have been contributed by leading scientists from five continents
