Data Analysis Charles M. Judd, Gary H. McClelland, Carey S. Ryan, 2011-03-15 This completely rewritten classic text features many new examples insights and topics including mediational categorical and multilevel models Substantially reorganized this edition provides a briefer more streamlined examination of data analysis Noted for its model comparison approach and unified framework based on the general linear model the book provides readers with a greater understanding of a variety of statistical procedures This consistent framework including consistent vocabulary and notation is used throughout to develop fewer but more powerful model building techniques The authors show how all analysis of variance and multiple regression can be accomplished within this framework The model comparison approach provides several benefits It strengthens the intuitive understanding of the material thereby increasing the ability to successfully analyze data in the future It provides more control in the analysis of data so that readers can apply the techniques to a broader spectrum of questions It reduces the number of statistical techniques that must be memorized It teaches readers how to become data analysts instead of statisticians The book opens with an overview of data analysis All the necessary concepts for statistical inference used throughout the book are introduced in Chapters 2 through 4 The remainder of the book builds on these models Chapters 5 7 focus on regression analysis followed by analysis of variance ANOVA mediational analyses non independent or correlated errors including multilevel modeling and outliers and error violations The book is appreciated by all for its detailed treatment of ANOVA multiple regression nonindependent observations interactive and nonlinear models of data and its guidance for treating outliers and other problematic aspects of data analysis Intended for advanced undergraduate or graduate courses on data analysis statistics and or quantitative methods taught in psychology education or other behavioral and social science departments this book also appeals to researchers who analyze data A protected website featuring additional examples and problems with data sets lecture notes PowerPoint presentations and class tested exam questions is available to adopters This material uses SAS but can easily be adapted to other programs A working knowledge of basic algebra and any multiple regression program is assumed

Data Analysis Josh Correll, Abigail M. Folberg, Charles M. Judd, Gary H. McClelland, Carey S. Ryan, 2025 This essential textbook provides an integrated treatment of data analysis for the social and behavioral sciences It covers all the key statistical models in an integrated manner that relies on the comparison of models of data estimated under the rubric of the general linear model The text describes the foundational logic of the unified model comparison framework It then shows how this framework can be applied to increasingly complex models including multiple continuous and categorical predictors as well as product predictors i e interactions and nonlinear effects The text also describes analyses of data that violate assumptions of independence homogeneity and normality The analysis of nonindependent data is treated in some detail covering standard repeated measures analysis of variance and providing an integrated introduction to multilevel or hierarchical linear models and logistic regression Highlights of the

fourth edition include Expanded coverage of generalized linear models and logistic regression in particular A discussion of power and ethical statistical practice as it relates to the replication crisis An expanded collection of online resources such as PowerPoint slides and test bank for instructors additional exercises and problem sets with answers new data sets practice questions and R code Clear and accessible this text is intended for advanced undergraduate and graduate level courses in data analysis
