GIS Applications in Agriculture, Volume Two David E. Clay,John F. Shanahan,2011-02-16 We are entering a new era in production agronomics Agricultural scientists the world over call for the development of techniques that simultaneously increase soil carbon storage and reduce agriculture s energy use In response site specific or precision agriculture has become the focus and direction for the three motivating forces that are changing agriculture today the expanding capacity of

personal computers the molecular biology revolution and the recent developments in information technology such as the increasing use of geographical information systems GIS Using mathematics technology and creativity GIS Applications in Agriculture Volume Two Nutrient Management for Energy Efficiency examines the development of nutrient management practices that help producers improve their profitability and energy efficiency Throughout the book chapters demonstrate how complex mathematical and spatial modeling approaches can provide the basis for much of our present and certainly our future management practices Highlighting recent successes and the nuts and bolts associated with implementing the proposed techniques the book covers energy efficiency calculations techniques for overcoming yield limiting factors soil information collection and analysis and remote sensing for improving management decisions It describes the development of an economically optimum site specific corn plant population equation based on an experiment containing many field sites the estimation of soil productivity and energy efficiency using online data sources and the assessment and implementation of site specific carbon and water management systems analyzing energy efficiency of compost and manures Emphasizing the mathematics that will enable producers to make full use of the technological advances made during the 21st century GIS Applications in Agriculture Volume Two holds the key to the successful sustainable and efficient production of food to feed the ever increasing world population *Rough Set and Knowledge Technology* JingTao Yao,Sheela Ramanna,Guoyin Wang,Zbigniew Suraj,2011-09-21 This book constitutes the refereed proceedings of the 6th International Conference on Rough Sets and Knowledge Technology RSKT 2011 held in Banff Canada in September 2011 The 89 revised full papers presented together with 3 keynote lectures and 1 invited tutorial session were carefully reviewed and selected from 229 submissions The papers are organized in topical sections on attribute reduction and feature selection generalized rough set models machine learning with rough and hybrid techniques knowledge technology and intelligent systems and applications

Contemporary Perspectives in Data Mining Kenneth D. Lawrence,Ronald K. Klimberg,2025-06-20 The series Contemporary Perspectives in Data Mining is composed of blind refereed scholarly research methods and applications of data mining The series is targeted both at the academic community as well as the business practitioner Environmental Geoinformatics Joseph Awange,John Kiema,2018-12-08 This second edition includes updated chapters from the first edition as well as five additional new chapters Light detection and ranging LiDAR CORONA historical de classified products Unmanned Aircraft Vehicles UAVs GNSS reflectometry and GNSS applications to climate variability shifting the main focus from monitoring and management to extreme hydro climatic and food security challenges and exploiting big data Since the publication of first edition much has changed in terms of technology and the demand for geospatial data has increased with the advent of the big data era For instance the use of laser scanning has advanced so much that it is unavoidable in most environmental monitoring tasks whereas unmanned aircraft vehicles UAVs drones are emerging as efficient tools that address food security issues as well as many other contemporary challenges Furthermore global navigation satellite systems

GNSS are now responding to challenges posed by climate change by unravelling the impacts of teleconnection e.g ENSO as well as advancing the use of reflected signals GNSS reflectometry to monitor e.g soil moisture variations Indeed all these rely on the explosive use of big data in many fields of human endeavour Moreover with the ever increasing global population intense pressure is being exerted on the Earth's resources leading to significant changes in its land cover e.g deforestation diminishing biodiversity and natural habitats dwindling fresh water supplies and changing weather and climatic patterns e.g global warming changing sea level Environmental monitoring techniques that provide information on these are under scrutiny from an increasingly environmentally conscious society that demands the efficient delivery of such information at a minimal cost Environmental changes vary both spatially and temporally thereby putting pressure on traditional methods of data acquisition some of which are highly labour intensive such as animal tracking for conservation purposes With these challenges conventional monitoring techniques particularly those that record spatial changes call for more sophisticated approaches that deliver the necessary information at an affordable cost One direction being pursued in the development of such techniques involves environmental geoinformatics which can act as a stand alone method or complement traditional methods
