Proactive Data Mining with Decision Trees Haim Dahan,Shahar Cohen,Lior Rokach,Oded Maimon,2014-02-14 This book explores a proactive and domain driven method to classification tasks This novel proactive approach to data mining not only induces a model for predicting or explaining a phenomenon but also utilizes specific problem domain knowledge to suggest specific actions to achieve optimal changes in the value of the target attribute In particular the authors suggest a specific implementation of the domain driven proactive approach for classification trees The book centers on the core idea of moving observations from one branch of the tree to another It introduces a novel splitting criterion for decision trees termed maximal utility which maximizes the potential for enhancing profitability in the output tree Two real world case studies one of a leading wireless operator and the other of a major security company are also included and demonstrate how applying the proactive approach to classification tasks can solve business problems *Proactive Data Mining with Decision Trees* is intended for researchers practitioners and advanced level students

Data Mining with Decision Trees and Decision Rules International Business Machines Corporation. Research Division,Chidanand V. Apté,Sholom M. Weiss,1997 Abstract This paper describes the use of decision tree and rule induction in data mining applications Of methods for classification and regression that have been developed in the fields of pattern recognition statistics and machine learning these are of particular interest for data mining since they utilize symbolic and interpretable representations Symbolic solutions can provide a high degree of insight into the decision boundaries that exist in the data and the logic underlying them This aspect makes these predictive mining techniques particularly attractive in commercial and industrial data mining applications We present here a synopsis of some major state of the art tree and rule mining methodologies as well as some recent advances

Evolutionary Decision Trees in Large-Scale Data Mining Marek Kretowski, 2019-06-05 This book presents a unified framework based on specialized evolutionary algorithms for the global induction of various types of classification and regression trees from data The resulting univariate or oblique trees are significantly smaller than those produced by standard top down methods an aspect that is critical for the interpretation of mined patterns by domain analysts The approach presented here is extremely flexible and can easily be adapted to specific data mining applications e g cost sensitive model trees for financial data or multi test trees for gene expression data The global induction can be efficiently applied to large scale data without the need for extraordinary resources With a simple GPU based acceleration datasets composed of millions of instances can be mined in minutes In the event that the size of the datasets makes the fastest memory computing impossible the Spark based implementation on computer clusters which offers impressive fault tolerance and scalability potential can be applied
