Innovation in Energy Systems

Taha Selim Ustun, 2019-11-27 It has been a little over a century since the inception of interconnected networks and little has changed in the way that they are operated Demand supply balance methods protection schemes business models for electric power companies and future development considerations have remained the same until very recently Distributed generators storage devices and electric vehicles have become widespread and disrupted century old bulk generation bulk transmission operation Distribution networks are no longer passive networks and now contribute to power generation Old billing and energy trading schemes cannot accommodate this change and need revision Furthermore bidirectional power flow is an unprecedented phenomenon in distribution networks and traditional protection schemes require a thorough fix for proper operation This book aims to cover new technologies methods and approaches developed to meet the needs of this changing field

Incomplete Data and Data Dependencies in Relational Databases Sergio Greco, Cristian Molinaro, Francesca Spezzano, 2022-06-01 The chase has long been used as a central tool to analyze dependencies and their effect on queries It has been applied to different relevant problems in database theory such as query optimization query containment and equivalence dependency implication and database schema design Recent years have seen a renewed interest in the chase as

an important tool in several database applications such as data exchange and integration query answering in incomplete data and many others It is well known that the chase algorithm might be non terminating and thus in order for it to find practical applicability it is crucial to identify cases where its termination is guaranteed Another important aspect to consider when dealing with the chase is that it can introduce null values into the database thereby leading to incomplete data Thus in several scenarios where the chase is used the problem of dealing with data dependencies and incomplete data arises This book discusses fundamental issues concerning data dependencies and incomplete data with a particular focus on the chase and its applications in different database areas We report recent results about the crucial issue of identifying conditions that guarantee the chase termination Different database applications where the chase is a central tool are discussed with particular attention devoted to query answering in the presence of data dependencies and database schema design Table of Contents Introduction Relational Databases Incomplete Databases The Chase Algorithm Chase Termination Data

Dependencies and Normal Forms Universal Repairs Chase and Database Applications **Principles of Transaction Processing** Philip A. Bernstein, Eric Newcomer, 2009-07-24 Principles of Transaction Processing is a comprehensive guide to developing applications designing systems and evaluating engineering products The book provides detailed discussions of the internal workings of transaction processing systems and it discusses how these systems work and how best to utilize them It covers the architecture of Web Application Servers and transactional communication paradigms The book is divided into 11 chapters which cover the following Overview of transaction processing application and system structure Software abstractions found in transaction processing systems Architecture of multitier applications and the functions of transactional middleware and database servers Queued transaction processing and its internals with IBM's Websphere MQ and Oracle's Stream AQ as examples Business process management and its mechanisms Description of the two phase locking function B tree locking and multigranularity locking used in SQL database systems and nested transaction locking System recovery and its failures Two phase commit protocol Comparison between the tradeoffs of replicating servers versus replication resources Transactional middleware products and standards Future trends such as cloud computing platforms composing scalable systems using distributed computing components the use of flash storage to replace disks and data streams from sensor devices as a source of transaction requests The text meets the needs of systems professionals such as IT application programmers who construct TP applications application analysts and product developers The book will also be invaluable to students and novices in application programming Complete revision of the classic non mathematical transaction processing reference for systems professionals Updated to focus on the needs of transaction processing via the Internet the main focus of business data processing investments via web application servers SOA and important new TP standards Retains the practical non mathematical but thorough conceptual basis of the first edition **Database Computing for Scholarly Research**

Sandra R. Schloen, Miller C. Prosser, 2023-12-23 This book discusses in detail a series of examples drawn from

scholarly projects that use the OCHRE database platform Online Cultural and Historical Research Environment These case studies illustrate the wide range of data that can be managed with this platform and the wide variety of problems solved by OCHRE s item based graph data model The unique features and design principles of the OCHRE platform are explained and justified helping readers to imagine how the system could be used for their own data Data generated by studies in the humanities and social sciences is often semi structured fragmented highly variable and subject to many interpretations making it difficult to represent adequately in a conventional database The authors examine commonly used methods of data management in the humanities and offer a compelling argument for a different approach that takes advantage of powerful computational techniques for organizing scholarly information This book is a challenge to scholars in the humanities and social sciences asking them to expect more from technology as they pursue their research goals Written jointly by a software engineer and a research scholar each with many years of experience in applying database methods to diverse kinds of scholarly data it shows how scholars can make the most of their existing data while going beyond the limitations of commonly used software tools to represent their objects of study in a more accurate nuanced and flexible way
