| 2 | Id |
| 3 | Rotor |
| 4 | Coil |
| 5 | Drive shaft |
| 6 | Supply chamber |
| 7 | Working area |

An electronically controlled fan clutch is used for accurate control of the fan speed.

The electronically controlled fan clutch checks and controls the fan speed to ensure that the flow of cooling air through the cooling system is sufficient to keep the coolant temperature and/or inlet air temperature within certain limits.

The coil (4) fitted to the drive shaft (5) with bearings generates a magnetic field. The duty cycle to the coil (4) will be modified depending on the variables stated above. This will cause changes in the magnetic field and the valve (2) will be attracted either more or less.

Control of the fan clutch depends on various factors:

- coolant temperature
- the inlet air temperature
- vehicle speed
- engine speed
- fan speed
- interder activation
- internal slip of the fan clutch (slip heat protection)

The fan clutch consists of a stator (1) and the rotor (3), which is fixed to the drive shaft (5). It also includes the supply chamber (6) for the silicone fluid.

The working area is located between the stator (1) and the rotor (3). The fan is fitted to the stator (1) and rotates freely around the drive shaft (5).

The speed of the fan is sensed by an internal Hall sensor and a pulse disc. This sensor sends a signal to the electronic unit DMCI. The electronic unit uses this signal to check the internal slip of the fan and the response to controls.
