The energy consumption graph shows your energy consumption (based on the number of steps counted) for up to the past seven days.

- Unit = kcal.

• Note that each "bar" of the graph is made up of two display dot columns. Day 5 in the example below indicates energy consumption of 250.1 to 250 kcal. Day 3 indicates 250.1 to 300 kcal.

- See "Top Display Area" and "Bottom Display Area" for information about controlling what appears in the top area and the bottom area of the Timekeeping Mode screen.
- Pressing (C) in any mode will illuminate the display for 1.5 seconds.

Using the Watch's Pedometer Functions

Your watch has a built-in pedometer that counts the number of steps you take while walking. It uses this count to calculate distance, pace, and other data. Some of the calculated data is based on personal information you need to input before using the watch. Measured and calculated data can be saved in watch memory for later recall whenever you need it.

Important!

- Before trying to use the watch's pedometer functions, you first need to configure personal information settings.

Normal Walking and Exercise Walking

There are two types of walking that can be measured by your watch: normal walking and exercise walking.

Note

- If you have both normal walking and exercise walking measurement turned on, the watch will give priority to exercise walking.
- Normal walking and exercise walking continue to count your steps while turned on, even if you change to another mode. The only time your steps are not counted is when an alarm is sounding or while a setting screen (indicated by a flashing setting) is on the display.

Normal Walking Measurement

Use normal walking measurement when you want to count the number of steps you take as you go about your normal daily life. You can turn on normal walking measurement in the Timekeeping Mode.

Exercise Walking Measurement

As its name suggests, exercise walking measurement is intended for counting your steps while walking briskly, as part of an exercise program. To turn on exercise walking measurement, you need to enter the Exercise Walking Mode.

Configuring Personal Information

You need to preset the following personal information before the watch can calculate your energy consumption and other data based on the number of steps you take while walking.

- Your current weight
- Your normal walking stride length
- Your exercise walking stride length
- Your age
- Your gender
- The energy consumption unit you want to use
- The weight unit you want to use
- The stride length unit you want to use
- The sensitivity level you want to use

You need to enter the Personal Data Setting Mode to configure personal information settings. While in the Timekeeping Mode, press (C) five times to enter the Personal Data Setting Mode.

Casio Phys Manual:

The Mad Math Manual Ahmad W. Chamoun, 2022-07-20 After studying and teaching math and science over the years I realized that many good opportunities for learning and teaching important and essential things were missing from the resources that were available Included in this book are many exercises techniques and insights that strengthen a learner's mathematical and logical abilities which are simply not to be found anywhere else Also included are things which I have learned from different disparate places that for the student's convenience have all been gathered into one place and which I attempted to explain in simpler terms than what is currently available After all it is hard enough to learn these concepts let alone have to shift through all of the data to find what really pertains to one's study Some of the material presented are things which I myself found to be the most confusing In this regard I hope that the manual can be a great resource for students trying to learn more about math and science as well as the workings of nature Even though it is unlikely a reader will be able to understand all of the material presented on their own and without the presence of a teacher having another resource in which the material and concepts are presented in a unique and simpler way is highly useful Generally when people learn about math and science they are usually not satisfied by the answer that their teacher or textbook has to give on why nature settled on a certain constant or equation It's mind boggling to me how many people fail to acknowledge the relatedness of many physical constants as well as the logic behind some of the greatest discoveries and in effect are missing out on a lot of the beauty behind science and the workings of nature
