Things to check before using the watch

1. Hold down (A) for about two seconds to enter the Timekeeping Mode, and then observe the movement of the (B) Second Hand.

2. Check the Home City and the daylight saving time (DST) setting.

Use the procedure under "To configure Home City settings" to configure your Home City and daylight saving time settings.

Important

World Time settings depend on correct Home City, time, and date settings in the Timekeeping Mode. Make sure these settings are configured correctly.

3. Set the current time.

See "Configuring Current Time and Date Settings".

The watch is now ready for use.

Charging the Watch

The face of the watch is a solar cell that generates power from light. The generated power charges a built-in rechargeable battery, which powers watch operations. The watch charges whenever it is exposed to light.

Charging Guide

Whenever you are not wearing the watch, be sure to leave it in a location where it is exposed to light.

- Best charging performance is achieved by exposing the watch to light that is as strong as possible.

When wearing the watch, make sure that its face is not blocked from light by the sleeve of your clothing.

- The watch may enter a sleep state if its face is blocked by your sleeve even only partially.

Warning!

Leaving the watch in bright light for charging can cause it to become quite hot. Take care when handling the watch to avoid burn injury. The watch can become particularly hot when exposed to the following conditions for long periods.

- On the dashboard of a car parked in direct sunlight
- Too close to an incandescent lamp
- Under direct sunlight

Important

- Keep the watch in an area normally exposed to bright light when storing it for long periods. This helps to ensure that power does not run down.
- Storing the watch for long periods in an area where there is no light or leaving it in such a way that it is blocked from exposure to light can cause power to run down. Make sure that the watch is exposed to bright light whenever possible.

Power Levels

Moving at two-second intervals.

You can get an idea of the watch's power level by observing the movement of the (B) Second Hand in the Timekeeping Mode.

- If the (B) Second Hand is moving normally at one-second intervals, power is at Level 1.
- If the (B) Second Hand is moving at two-second intervals, power is at Level 2, which is quite low. Expose the watch to light as soon as possible so it can charge.

Level	Hand Movement	Function Status
1	Normal	All functions enabled.
2	Second Hand moving at two-second intervals Other changes to 1 (some positions)	Sleep disabled.
3	Second Hand stopped Other changes to 1 (some positions)	All functions disabled.

- When power drops to Level 3, all functions will be disabled but the watch will continue to keep time internally for about one week. If you recharge the battery sufficiently during this period, the analog hands will move automatically to the correct setting and regular timekeeping will resume. After one week, all settings (including timekeeping) will be cleared. Recharging the battery will reset all settings to their initial factory defaults.

Power Recovery Mode

The watch is designed to go into a power recovery mode that stops hand operation temporarily whenever power suddenly drops below a certain level due to overuse of the alarm tone over a short period. Note that all operations are disabled while the watch is in the power recovery mode.

The hands will move to the correct positions and the watch will resume normal operation after power recovers (in about 15 minutes). Putting the watch in a location where it is exposed to light will help power to recover sooner.

Charging Times

Exposure Level (Brightness)	Daily Operation, *1	Level Change *2		
		Level 3	Level 2	Level 1
Outdoor sunlight (50,000 lux)	8 minutes	3 hours	24 hours	120 hours
Window sunlight (10,000 lux)	30 minutes	6 hours	50 hours	250 hours
Window sunlight on cloudy day (5,000 lux)	40 minutes	10 hours	80 hours	400 hours
Indoor fluorescent lighting (500 lux)	8 hours	110 hours	900 hours	4,500 hours

- *1 Approximate exposure each day to generate power for normal daily operation.
- *2 Approximate exposure to take power up one level.
- The above exposure times are for reference only. Actual exposure times depend on lighting conditions.
- For details about the operating time and daily operating conditions, see the "Power Supply" section of the Specifications.

Power Saving

Power Saving enters a sleep state automatically whenever the watch is left for a certain period in an area where it is dark. The table below shows how watch functions are affected by Power Saving.

- There actually are two sleep state levels: "second hand sleep" and "function sleep".

Elapsed Time in Dark	Operation
40 to 70 minutes (second hand sleep)	(B) Second Hand only is stopped at 12 o'clock; all other functions are enabled.
8 or 7 days (function sleep)	• All functions, including analog timekeeping, disabled. • Internal timekeeping maintained.

- The watch will not enter a sleep state between 6:00 AM and 9:00 PM. If the watch is already in a sleep state when 6:00 AM arrives, however, it will remain in the sleep state.
- The watch will not enter a sleep state while it is in the Stopwatch Mode.

To recover from the sleep state

Move the watch to a well-lit area or press any button.
