Computation in Science Konrad Hinsen, 2020 In the course of only a few decades computers have revolutionized scientific research and more and more scientists are writing computer programs for doing their work In spite of the ubiquitous use of computers in science few researchers in the natural sciences have any schooling in computer science software engineering or numerical analysis They usually acquire their computing knowledge on the job and often feel overwhelmed by the amount of computing knowledge they must absorb *Computation in Science* provides a background in computation for scientists who use computational methods The book explains how computing is used in the natural sciences and provides a high level overview of relevant aspects of computer science and software engineering with a focus on concepts results and applications The goal of this book is to explain these basic principles and to show how they relate to the tasks of a scientist s daily work in a language familiar to them Its unique feature is in connecting the dots between computational science the theory of computation and information and software engineering It will compensate for the general lack of any formal training in computer science and information theory allowing readers to better

understand how they use computers in their work and how computers work Readers will learn to use computers with more confidence and to see computing technologies in a different light evaluating them based on how they contribute to doing science This new edition has been significantly updated and extended to reflect developments in scientific computing including new examples and references It also includes a new chapter on reproducibility which reflects the importance that computational reproducibility plays Accompanied by a website maintained by the author which hosts companion code and supplementary material it is intended for both graduate students and experienced scientists Some hands on experience with computing is highly desirable but no competence in any specific computing technology is expected [Python Scripting for Computational Science](#) Hans Petter Langtangen,2013-03-14 The primary purpose of this book is to help scientists and engineers work ing intensively with computers to become more productive have more fun and increase the reliability of their investigations Scripting in the Python programming language can be a key tool for reaching these goals 27 29 The term scripting means different things to different people By scripting I mean developing programs of an administering nature mostly to organize your work using languages where the abstraction level is higher and program ming is more convenient than in Fortran C C or Java Perl Python Ruby Scheme and Tel are examples of languages supporting such high level programming or scripting To some extent Matlab and similar scientific com puting environments also fall into this category but these environments are mainly used for computing and visualization with built in tools while script ing aims at gluing a range of different tools for computing visualization data analysis file directory management user interfaces and Internet communi cation So although Matlab is perhaps the scripting language of choiee in computational science today my use of the term scripting goes beyond typi cal Matlab scripts Python stands out as the language of choice for scripting in computational science because of its very elean syntax rieh modulariza tion features good support for numerical computing and rapidly growing popularity What Scripting is About *Encountering Artificial Intelligence* Matthew J. Gaudet,Noreen Herzfeld,Paul Scherz,Jordan J. Wales,2024-03-15 What does it mean to consider the world of AI through a Christian lens Rapid developments in AI continue to reshape society raising new ethical questions and challenging our understanding of the human person Encountering Artificial Intelligence draws on Pope Francis s discussion of a culture of encounter and broader themes in Catholic social thought in order to examine how current AI applications affect human relationships in various social spheres and offers concrete recommendations for better implementation The document also explores questions regarding personhood consciousness and the kinds of relationships humans might have with even the most advanced AI Through these discussions the document investigates the theoretical and practical challenges to interpersonal encounter raised by the age of AI **Reproducible Research in Pattern Recognition** Bertrand Kerautret,Miguel Colom,Daniel Lopresti,Pascal Monasse,Hugues Talbot,2019-06-28 This book constitutes the thoroughly refereed post workshop proceedings of the Second International Workshop on Reproducible Research in Pattern Recognition RRPR 2018 in Beijing

China in August 2018 The 8 revised full papers presented together 6 short papers were carefully reviewed and selected from 14 submissions This year the workshop did focus on Digital Geometry and Mathematical Morphology The first track 1 on RR Framework was dedicated to the general topics of Reproducible Research in Computer Science with a potential link to Image Processing and Pattern Recognition In the second track 2 the authors described their works in terms of Reproducible Research

Workflow Scheduling on Computing Systems Kenli Li, Xiaoyong Tang, Jing Mei, Longxin Zhang, Wangdong Yang, Keqin Li, 2022-08-12 This book will serve as a guide in understanding workflow scheduling techniques on computing systems such as Cluster Supercomputers Grid computing Cloud computing Edge computing Fog computing and the practical realization of such methods It offers a whole new perspective and holistic approach in understanding computing systems workflow scheduling Expressing and exposing approaches for various process centric cloud based applications give a full coverage of most systems energy consumption reliability resource utilization cost and application stochastic computation By combining theory with application and connecting mathematical concepts and models with their resource management targets this book will be equally accessible to readers with both Computer Science and Engineering backgrounds It will be of great interest to students and professionals alike in the field of computing system design management and application This book will also be beneficial to the general audience and technology enthusiasts who want to expand their knowledge on computer structure

The Practice of Reproducible Research Justin Kitzes, Daniel Turek, Fatma Deniz, 2018 The Practice of Reproducible Research presents concrete examples of how researchers in the data intensive sciences are working to improve the reproducibility of their research projects In each of the thirty one case studies in this volume the author or team describes the workflow that they used to complete a real world research project Authors highlight how they utilized particular tools ideas and practices to support reproducibility emphasizing the very practical how rather than the why or what of conducting reproducible research Part 1 provides an accessible introduction to reproducible research a basic reproducible research project template and a synthesis of lessons learned from across the thirty one case studies Parts 2 and 3 focus on the case studies themselves The Practice of Reproducible Research is an invaluable resource for students and researchers who wish to better understand the practice of data intensive sciences and learn how to make their own research more reproducible
