

- Measure the distance from the blower discharge opening in the bottom of the roof unit to the interior ceiling line. See Figure 18. Take the aluminum duct collar and trim its height to this measurement less $\frac{1}{4}$ ". Tape around the seam of the duct collar from top to bottom, both inside and outside after it has been trimmed.

Fig. 18

- Place the untrimmed (factory sheared) end of the duct collar over the ceiling assembly duct discharge opening flanges and position it around the opening. See Figure 19.

Fig. 19

- Lift the ceiling assembly into space at the roof opening with the duct collar lined with the blower discharge opening and push the duct collar firmly into the sealant surrounding the blower discharge opening. See Figure 18. Also route the 115 volt power supply wire down through the ceiling assembly. See Figure 20.

Fig. 20

IMPORTANT NOTICE

Before making the plug connection, observe that the "ridged" section of the plug is aligned and matched with the "ridged" receptacle section. **DO NOT USE UNDUE FORCE** and make sure the lock-in tabs are snapped in place.

IMPORTANT NOTICE

To prevent a loss of discharge air, the duct collar must have an air tight seal at the roof unit's blower discharge opening and at the ceiling assembly's blower discharge opening.

- Take the three long bolts and washers that are provided and secure the ceiling assembly to the roof unit. See Figure 21.

Fig. 21

NOTE

Use a rotating, tightening procedure (similar as is practiced for car tire rim mounting). This will assure even compression and seal of the gasket.

Take the electrical conduit hanging down from the bottom of the air conditioning unit and telescope it up into the bottom of the air conditioning unit until you can plug it easily into the receptacle at the back of the selector switch control box (See Figure 22). Seal around gap, where conduit telescopes into bottom of air conditioning unit, with prestate permagum or other pliable sealant.
