Internally Mounted Slave Cylinder

With the quick-disconnect coupling, no air should enter the system when the coupling is disconnected. However, if air should somehow enter the system, it must be bled.

1. Remove the reservoir cap and diaphragm. Fill the reservoir with DOT 3 brake fluid.

2. Connect a piece of rubber tubing to the slave cylinder bleed screw. Place the other end in a container.

3. Loosen the bleed screw. Gravity will force fluid from the master cylinder to flow down to the slave cylinder, forcing air out of the bleed screw. When a steady stream with no bubbles flows out, the system is bled. Close the bleed screw.

Check periodically to make sure the master cylinder reservoir doesn't run dry.

Clutch release bearing removal with the concentric slave cylinder
