Davis Statistics And Data Analysis In Geology:

Statistics and Data Analysis in Geology John C. Davis, 2011 Special Features Offers a comprehensive treatment of statistics in geology Topics progress from background information to analysis of geological sequences then maps and finally multivariate observations The book places special emphasis on probability and statistics including nonparametric statistics constant sum data eigenvalue calculations analysis of directional data mapping and geostatistics fractals and multivariate analysis The text now includes numerous geological data sets that illustrate how specific computational procedures can be applied to problems in the Earth sciences All data sets are available on the book's companion Web site Each chapter now ends with a set of exercises of greater or lesser complexity that the student can address using methods discussed in the chapter Provides expanded coverage of elementary probability theory The discussion of nonparametric methods has been expanded to address closure effects Coverage of eigenvalues and eigenvectors has been revised Includes a new section on singular value decomposition and the relationship between R and Q mode factor methods in the chapter on multivariate analysis The section on contour mapping has been revised to reflect modern practices Includes revised coverage of the many varieties of kriging and provides a series of simple demonstrations that illustrate how geostatistical methodologies work Includes a discussion of fractals a promising area of future research The section on regression has been expanded to include several variants that have special significance in the Earth sciences

Compositional Data Analysis in the Geosciences Antonella Buccianti, G. Mateu-Figueras, Vera Pawlowsky-Glahn, 2006 Since Karl Pearson wrote his paper on spurious correlation in 1897 a lot has been said about the statistical analysis of compositional data mainly by geologists such as Felix Chayes The solution appeared in the 1980s when John Aitchison proposed to use logratios Since then the approach has seen a great expansion mainly building on the idea of the natural geometry of the sample space Statistics is expected to give sense to our perception of the natural scale of the data and this is made possible for compositional data using logratios This publication will be a milestone in this process

Progress in Geomathematics Graeme Bonham-Carter, Cheng Qiuming, 2008-09-20 Celebrating Frits Agterberg's half century of publication activity in geomathematics this volume's 28 timely papers written by his friends and colleagues treat a variety of subjects of current interest many of them also studied by Frits including spatial analysis in mineral resource assessment quantitative stratigraphy nonlinear multifractal models compositional data analysis time series analysis image analysis and geostatistics Professor Agterberg published his first paper as a graduate student in 1958 and has since produced and

continues to publish a steady stream of research papers on a wide variety of subjects of interest to geomathematical practitioners. Most of the papers included here address methodology and feature practical case studies so that the book likely has broad appeal to those interested in mathematical geosciences both to academic researchers seeking a comprehensive overview and also to practitioners of geomathematical approaches in industry.

Chemometrics in Analytical Spectroscopy Mike J. Adams, 2007-10-31

Chemometrics in Analytical Spectroscopy provides students and practising analysts with a tutorial guide to the use and application of the more commonly encountered techniques used in processing and interpreting analytical spectroscopic data. In detail, the book covers the basic elements of univariate and multivariate data analysis, the acquisition of digital data and signal enhancement by filtering and smoothing, feature selection and extraction, pattern recognition, exploratory data analysis by clustering, and common algorithms in use for multivariate calibration techniques. An appendix is included which serves as an introduction or refresher in matrix algebra. The extensive use of worked examples throughout gives *Chemometrics in Analytical Spectroscopy* special relevance in teaching and introducing chemometrics to undergraduates and post graduates undertaking analytical science courses. It assumes only a very moderate level of mathematics, making the material far more accessible than other publications on chemometrics. The book is also ideal for analysts with little specialist background in statistics or mathematical methods who wish to appreciate the wealth of material published in chemometrics.
