Cannabinoids As Therapeutics

Cannabinoids as Therapeutics Raphael Mechoulam, 2005-05-19 Only a few years ago the endocannabinoid system was unknown. Today we are aware that endocannabinoids are involved in many of the functions of the mammalian body in neuroprotection, appetite, suckling, pain, reproduction, anxiety, memory, bone formation, etc. This volume presents an up-to-date picture of some of the major fields of endocannabinoid research. It summarizes the actions of the endocannabinoids on various physiological systems and opens new therapeutic windows to a large number of diseases. The first chapter on the use of Cannabis in India can be viewed as an expression of thanks to the herbal practitioners who for centuries passed on the medical traditions associated with the drug. The chapter on chemistry is a short summary of active plant, synthetic, and endogenous cannabinoids being investigated today, many of which are mentioned later in the book. Cannabidiol is an unusual cannabinoid; it does not bind to the known receptors and yet exerts a variety of effects. Hence a chapter is devoted to it. Further chapters deal with the endocannabinoid system and the endocannabinoids in a variety of conditions and physiological systems. The concluding chapter describes the research done on Sativex, a standardized plant extract, shortly to be introduced in Canada as a drug for multiple sclerosis. The intended audience is drug researchers, medicinal chemists, pharmacologists, clinicians, neuroscientists, physiologists, and clinicians interested in the effect of the endocannabinoid system in various physiological systems.

Cannabinoids as Therapeutics Raphael Mechoulam, 2006-03-30 In recent years, cannabis research has concentrated on the potential of cannabinoids as therapeutic substances, particularly in serious chronic illnesses such as multiple sclerosis. Most volumes published on cannabinoids so far concentrate on the biological activity, biochemistry, and pharmacology, whereas this volume concentrates on the diseases, the physiological effects, and therapeutic use of cannabinoids. The volume editor, Prof. Mechoulam, was the first to isolate the prime active constituent, THC (Tetrahydrocannabinol) of marijuana. He published extensively on the pharmacological activities of cannabinoids. The volume is of interest to researchers and clinicians from pharmacology, neuroscience, and medicinal research.

Cannabis and Cannabinoids Ethan B. Russo, 2013-09-05 Study the latest research findings by international experts. This comprehensive volume presents the state of the art scientific research on the therapeutic uses of cannabis and its derivatives. All too often, discussions of the potential medical uses of this substance are distorted by political considerations that have no place in a medical debate. Cannabis and Cannabinoids: Pharmacology, Toxicology, and Therapeutic Potential features a fair, equitable discussion of this emerging and controversial medical topic by the world's foremost researchers. Cannabis and Cannabinoids examines the benefits, drawbacks, and side effects of medical marijuana as a treatment for various conditions and diseases. This book discusses the scientific basis for marijuana's use in cases of pain, nausea, anorexia, and cachexia. It also explores its possible benefits in glaucoma, ischemia, spastic disorders, and migraine. Cannabis and Cannabinoids examines all facets of the medical use of marijuana, including botany, history, biochemistry, pharmacology, clinical use, toxicology, side effects. Cannabis
