Diffusion And Ecological Problems Modern Perspectives Second Edition:

Diffusion and Ecological Problems: Modern Perspectives Akira Okubo, Smon A. Levin, 2002-03-28 Surveying a wide variety of mathematical models of diffusion in the ecological context this book is written with the primary intent of providing scientists particularly physicists but also biologists with some background of the mathematics and physics of diffusion and how they can be applied to ecological problems Equally this is a specialized text book for graduates interested in mathematical ecology assuming no more than a basic knowledge of probability and differential equations Each chapter in this new edition has been substantially updated by appropriate leading researchers in the field and contains much new material covering recent developments

Asymptotic Methods in Nonlinear Wave Phenomena Tommaso Ruggeri, Antonio M. Greco, Marco Sammartino, 2007 This book brings together several contributions from leading experts in the field of nonlinear wave propagation This field which during the last three decades has seen important breakthroughs from the theoretical point of view has recently acquired increased relevance due to advances in the technology of fluids e g at microscale or nanoscale and the recognition of crucial applications to the understanding of biological phenomena Nonlinear wave theory requires the use of disparate approaches including formal and rigorous asymptotic methods Lie group theory energy methods numerical analysis and bifurcation theory This book presents a unique blend in which different aspects of the theory are enlightened and several real life applications are investigated The book will be a valuable resource for applied scientists interested in some of the most recent advances in the theory and in the applications of wave propagation shock formation nonequilibrium thermodynamics and energy methods

Proceedings "WASCOM 2007", 14th Conference on Waves and Stability in Continuous Media Roberto Monaco, 2008 This volume is the fifth in a series of proceedings which started in 1999 The contributions include the latest results on the theory of wave propagation extended thermodynamics and the stability of the solutions to partial differential equations

Nonlinear Dynamics and Evolution Equations Hermann Brunner, Xiao-Qiang Zhao, Xingfu Zou, 2006 The papers in this volume reflect a broad spectrum of current research activities on the theory and applications of nonlinear dynamics and evolution equations They are based on lectures given during the International Conference on Nonlinear Dynamics and Evolution Equations at Memorial University of Newfoundland St John s NL Canada July 6 10 2004 This volume contains thirteen invited and refereed papers Nine of these are survey papers introducing the reader to and describing the current state of the art in major areas of dynamical systems ordinary functional and partial differential equations and applications of such equations in the mathematical modelling of various biological and physical phenomena These papers are complemented by four research papers that examine particular problems in the theory and applications of dynamical systems Information for our distributors Titles in this series are copublished with the Fields Institute for Research in Mathematical Sciences Toronto Ontario Canada

Biomat 2006 - International Symposium On Mathematical And Computational Biology Rubem P Mondaini, Rui Dilao, 2007-05-23 This useful volume contains the

contributions from the keynote speakers of the BIOMAT 2006 symposium as well as selected contributions in the areas of mathematical biology biological physics biophysics and bioinformatics It contains new results contributions and comprehensive reviews to the mathematical modeling of infectious diseases such as HIV tuberculosis and hepatitis B Mathematical models for physiological disorders including tumors aneurysms and metabolic diseases are discussed and analyzed This book also contains original contributions to de novo protein structure prediction and multi objective optimization techniques applied to protein tertiary structure prediction DNA evolutionary issues stem cell biology dynamics of biologic membranes reaction diffusion mechanisms population dynamics and bioeconomics are covered and discussed throughout this book

Geometry and Topology in Hamiltonian Dynamics and Statistical Mechanics Marco Pettini, 2007-06-14 It is a special pleasure for me to write this foreword for a remarkable book by a remarkable author Marco Pettini is a deep thinker who has spent many years probing the foundations of Hamiltonian chaos and statistical mechanics in particular phase transitions from the point of view of geometry and topology

It is in particular the quality of mind of the author and his deep physical as well as mathematical insights which make this book so special and inspiring It is a must for those who want to venture into a new approach to old problems or want to use new tools for new problems Although topology has penetrated a number of elds of physics a broad participation of topology in the clarification and progress of fundamental problems in the above mentioned elds has been lacking The new perspectives topology gives to the above mentioned problems are bound to help in their clarification and to spread to other elds of science The sparsity of geometric thinking and of its use to solve fundamental problems when compared with purely analytical methods in physics could be relieved and made highly productive using the material discussed in this book It is unavoidable that the physicist reader may have then to learn some new mathematics and be challenged to a new way of thinking but with the author as a guide he is assured of the best help in achieving this that is presently available

Using the Mathematics Literature Kristine K. Fowler, 2004-05-25 This reference serves as a reader friendly guide to every basic tool and skill required in the mathematical library and helps mathematicians find resources in any format in the mathematics literature It lists a wide range of standard texts journals review articles newsgroups and Internet and database tools for every major subfield in mathematics and details methods of access to primary literature sources of new research applications results and techniques Using the Mathematics Literature is the most comprehensive and up to date resource on mathematics literature in both print and electronic formats presenting time saving strategies for retrieval of the latest information

Random Walk and Diffusion Models Wolf Schwarz, 2022-10-06 This book offers an accessible introduction to random walk and diffusion models at a level consistent with the typical background of students in the life sciences In recent decades these models have become widely used in areas far beyond their traditional origins in physics for example in studies of animal behavior ecology sociology sports science population genetics public health applications and human decision making Developing the main

formal concepts the book provides detailed and intuitive step by step explanations and moves smoothly from simple to more complex models Finally in the last chapter some successful and original applications of random walk and diffusion models in the life and behavioral sciences are illustrated in detail The treatment of basic techniques and models is consolidated and extended throughout by a set of carefully chosen exercises

Lagrangian Transport in Geophysical Jets and Waves Roger M. Samelson, Stephen Wiggins, 2006-11-24 The purpose of this book is to provide an accessible introduction to a new set of methods for the analysis of Lagrangian motion in geophysical flows These methods were originally developed in the abstract mathematical setting of dynamical systems theory through a geometric approach to differential equations that ultimately owes much to the insights of Poincaré 1892 In the 1980s and 1990s researchers in applied mathematics and fluid dynamics recognized the potential of this approach for the analysis of fluid motion Despite these developments and the existence of a substantial body of work on geophysical fluid problems in the dynamical systems and geophysical literature no introductory text has been available that presents these methods in the context of geophysical fluid flow The text is meant to be accessible to geophysical fluid scientists and students familiar with the mathematics of ordinary mostly and partial sometimes differential equations It assumes little or no prior knowledge of dynamical systems theory An effort is made to explain concepts from a physical point of view and to avoid the theorem and proof constructions that appear in dynamical systems texts We hope that this book will prove useful to graduate students, research scientists and educators in any branch of geophysical fluid science in which the motion and transport of fluid and of materials carried by the fluid is of interest We hope that it will also prove interesting and useful to applied mathematicians who seek an introduction to an intriguing and rapidly developing area of geophysical fluid dynamics

Modeling in Biopharmaceutics, Pharmacokinetics and Pharmacodynamics Panos Macheras, Athanassios Iliadis, 2006-04-26 This book presents a novel modeling approach to biopharmaceutics, pharmacokinetics and pharmacodynamic phenomena It shows how advanced physical and mathematical methods can expand classical models in order to cover heterogeneous drug biological processes and therapeutic effects in the body Throughout many examples are used to illustrate the intrinsic complexity of drug administration related phenomena in the human body justifying the use of advanced modeling methods
