**Plasma Works From Topological Geometries to Urban Landscaping (color)** Maria Elisabetta Bonafede, 2014-12-02 olume 33 of The IT Revolution in Architecture this book outlines the work of Plasma studio from the cultural elements tied to landform to the parametric development of the projects to the very organization of the studio The topological geometries of the interior of the Hotel Puerto America the advanced conceptualization of landform architecture the approach to the

complex design synthesis of landscape urbanism at the great Flowing Gardens in Xi an are a demonstration of how digital experimentation is a crucial weapon today The author explores the intersections between digital philosophy emerging technologies and architecture and offers the reader the first complete critical and theoretical analysis of the work of Plasma studio Founder and editor of the book series before with Birkh user and Testo Immagine and now with EdilStampa is Antonino Saggio [www arc1 Uniroma1 it](http://www.arc1.uniroma1.it) Saggio IT *The Autopoiesis of Architecture, Volume I* Patrik Schumacher, 2011-04-20 Take a theoretical approach to architecture with *The Autopoiesis of Architecture* which presents the topic as a discipline with its own unique logic Architecture s conception of itself is addressed as well as its development within wider contemporary society Author Patrik Schumacher offers innovative treatment that enriches architectural theory with a coordinated arsenal of concepts facilitating both detailed analysis and insightful comparisons with other domains such as art science and politics He explores how the various modes of communication comprising architecture depend upon each other combine and form a unique subsystem of society that co evolves with other important autopoietic subsystems like art science politics and the economy The first of two volumes that together present a comprehensive account of architecture s autopoiesis this book elaborates the theory of architecture s autopoeisis in 8 parts 50 sections and 200 chapters Each of the 50 sections poses a thesis drawing a central message from the insights articulated within the respective section The 200 chapters are gathering and sorting the accumulated intelligence of the discipline according to the new conceptual framework adopted in order to catalyze and elaborate the new formulations and insights that are then encapsulated in the theses However while the theoretical work in the text of the chapters relies on the rigorous build up of a new theoretical language the theses are written in ordinary language with the theoretical concepts placed in brackets The full list of the 50 theses affords a convenient summary printed as appendix at the end of the book The second volume completes the analysis of the discourse and further proposes a new agenda for contemporary architecture in response to the challenges and opportunities that confront architectural design within the context of current societal and technological developments *The Urbanism Reader* Stefan Al, Tom Verebes, 2025-02-06 Positioning design at the center of the debate *The Urbanism Reader* brings together classic and contemporary readings to help designers understand the complexities of cities and urban design in the 21st century The selection of readings presented here is uniquely tailored to a design perspective for architects and urban designers balancing social issues in urbanism with a clear focus on foregrounding design as an instrument for change in cities and examining the outcomes and challenges of recent design theories design methods and technologies in the built urban environment Covering today s most urgent issues 45 texts explore key topics in urbanism from digital design technologies to smart cities from the ongoing ecological crisis to public health and the impact of Covid 19 and from emergence and informality to economic inequity in global cities Chapters cover cultural issues including diversity indigenous knowledge decolonization social justice and inclusion alongside technological developments while a final chapter speculates

on the future of urbanism through readings in AI virtual reality and the frontiers of current thinking in architecture and urban design The extracts are grouped by theme each with an introduction to the historical contexts and guiding paradigms helping design students researchers and professionals to make sense of the diverse field of theory and practice in the past present and future of global urbanism *Digital Cities* Neil Leach,2009-08-31 Guest edited by Neil Leach What is the impact of digital technologies on the design and analysis of cities For the last 15 years the profound impact of computer aided techniques on architecture has been well charted From the use of standard drafting packages to the more experimental use of generative design tools and parametric modelling digital technologies have come to play a major role in architectural production But how are they helping architects and designers to operate at the urban scale And how might they be changing the way in which we perceive and understand our cities Features some of the world s leading experimental practices such as Zaha Hadid Architects R Sie n Biothing and Xefirotarch Takes in exciting emerging practices such as moh architects kokkugia and THEVERYMANY and work by students at some of the most progressive schools such as the AA Dessau Institute of Architecture and RMIT Contributors include Michael Batty Benjamin Bratton Alain Chiaradia Manuel DeLanda Vicente Guallart and Peter Trummer **Masterplanning Futures** Lucy Bullivant,2012 Lucy Bullivant analyses the ideals and processes of international masterplans and their role in the evolution of many different types of urban contexts in both the developed and developing world Among the book s key themes are landscape driven schemes social equity through the reevaluation of spatial planning and the evolution of strategies responding to a range of ecological issues and the demands of social growth The author s research was enabled by grants from the Commission for Architecture and the Built Environment CABE the SfA the Netherlands Architecture Fund the Danish Embassy and support from the Alfred Herrhausen Society

*Parametricism 2.0* Patrik Schumacher,2016-08-22 Parametricism is an avant garde architecture and design movement that has been growing and maturing over the last 15 years emerging as a remarkable global force The tendency started in architecture but now encompasses all design disciplines from urban design to fashion In architecture the style has an international following and is currently progressing beyond its experimental roots to make an impact on a broader scale with practices like Zaha Hadid Architects ZHA winning and completing large scale architectural projects worldwide Parametricism implies that all elements and aspects of an architectural composition or product are parametrically malleable and the style owes its original unmistakable physiognomy to its unprecedented use of computational design tools and fabrication methods All design parameters are conceived as variables that allow the design to vary and adapt to the diverse complex and dynamic requirements of contemporary society Although Parametricism has been talked about and hotly debated for a number of years so far there has been no publication dedicated to Parametricism The issue is guest edited by Patrik Schumacher partner at ZHA and one of the world s most highly renowned advocates of Parametricism Contributors Philippe Block Shajay Bhooshan Mark Burry Mario Carpo Manuel DeLanda John Frazer Mark Foster Gage Enriqueta Llabres

and Eduardo Rico Achim Menges Theo Spyropoulos Robert Stuart Smith Philip F Yuan Featured architects and designers Arup Mark Fornes THEVERYMANY Zaha Hadid Architects ZHA and Ross Lovegrove **Time for Architecture** Robert Adam, 2020-02-24 Using time as a unifying theme this book critically analyses many of the key concepts in modern architecture and urban design such as modernity innovation timelessness and sustainability Drawing on the statements of contemporary architects and with reference to a wide range of sources from history philosophy sociology and anthropology as well as studies in diverse subjects such as science fiction colonialism and archaeology the text provides a new perspective on much of the thinking behind contemporary design In addition it develops original and practical theories on the meanings of modernity the variable ageing of the environment the central role of longevity in sustainability the significance of authenticity in conservation and the relationship between collective memory and tradition **The Autopoiesis of Architecture, Volume II** Patrik Schumacher, 2012-04-24 This is the second part of a major theoretical work by Patrik Schumacher which outlines how the discipline of architecture should be understood as its own distinct system of communication Autopoeisis comes from the Greek and means literally self production it was first adopted in biology in the 1970s to describe the essential characteristics of life as a circular self organizing system and has since been transposed into a theory of social systems This new approach offers architecture an arsenal of general comparative concepts It allows architecture to be understood as a distinct discipline which can be analyzed in elaborate detail while at the same time offering insightful comparisons with other subject areas such as art science and political discourse On the basis of such comparisons the book insists on the necessity of disciplinary autonomy and argues for a sharp demarcation of design from both art and engineering Schumacher accordingly argues controversially that design as a discipline has its own sui generis intelligence with its own internal logic reach and limitations Whereas the first volume provides the theoretical groundwork for Schumacher's ideas focusing on architecture as an autopoietic system with its own theory history medium and its unique societal function the second volume addresses the specific contemporary challenges and tasks that architecture faces It formulates these tasks looking specifically at how architecture is seeking to organize and articulate the complexity of post fordist network society The volume explicitly addresses how current architecture can upgrade its design methodology in the face of an increasingly demanding task environment characterized by both complexity and novelty Architecture's specific role within contemporary society is explained and its relationship to politics is clarified Finally the new global style of Parametricism is introduced and theoretically grounded
