Digital Fabrication In Architecture:

Digital Fabrication in Architecture, Engineering and Construction Luca Caneparo, 2013-10-02 Digital technologies are changing the relationship between design and construction with computer models CAD CAM and prototyping designers can gain direct control of building and construction processes The ability to digitally model designs and thus to use those models directly in the context of production creates a synthesis between design and construction in keeping with the tradition of the close relationship between design and craftsmanship between the quality of the design and the rules of the craft The evolution of the culture of design and construction is the underlying theme of this book The aim is to discuss the direction that innovation is now taking with a particular focus on today's cutting edge architectures The method addresses the ways in which different societies have dealt with the issues of their age regarding design and construction the different contributions provided by various techniques and with them the meanings expressed by the architecture As building design using digital tools requires specific skills in the fabrication processes and in the languages used by information technology the book also offers a practical guide to new methods and techniques of managing and controlling fabrication for AEC A systematic analysis of new skills used in the design process presents an overview of opportunities for architects and engineers By collecting information on significant projects and analyzing them the book explores the technical and artistic potential of digital technology The cases studied are the outcomes of groundbreaking projects which were able to give form and significance to technological research They show that digital tools are not the exclusive prerogative of large firms but can also be adopted by teams working across small and medium sized firms firms which have been able to use informed research to link innovative design with the possibilities offered by digital fabrication in architecture *Digital Fabrication* Neil Leach, Achim Menges, 2018 Digital Fabrication offers an informed overview of the impact of digital technologies on architectural fabrication today providing a snapshot of the latest developments in the field drawing upon the leading experts in architectural practice and education from across the world Publication accompanies that of a companion volume Computational Design ISBN 9787560873336 How are new digital fabrication technologies changing the ways in which architects are constructing buildings today Digital Fabrication offers a range of informed opinions on the subject written by some of the leading authorities in the world It addresses new digital fabrication technologies such as 3D printing computer numerically controlled milling along with other robotically controlled manufacturing operations such as laser cutting bandsaw cutting stitching weaving forming bending folding and stacking The volume is divided into different sections comprising Manifestos Methodologies Interviews and Projects and also includes a helpful Introduction that offers a brief history of digital fabrication **Digital Fabrication in Architecture** Nick Dunn, 2012-09-07 With the increasing sophistication of CAD and other design software there is now a wide array of means for both designing and fabricating architecture and its components The proliferation of advanced modelling software and hardware has enabled architects and

students to conceive and create designs that would be very difficult to do using more traditional methods The use of CAD technologies in the production of physical models prototypes and individual elements is increasingly widespread through processes such as CAD CAM CNC milling and rapid prototyping This translation of computer generated data to physical artefact can also be reversed with devices such as a digitiser which traces the contours of physical objects directly into the computer This book focuses on the inspiring possibilities for architecture that can be explored with all the different technologies and techniques available for making complete designs or their components

Constructing Change: The Impact of Digital Fabrication on Sustainability Ena Lloret-Fritschi, Selen Ercan Jenny, David Jenny, 2024-09-23 Every year nearly 100 billion tonnes of raw material globally is extracted from the earth approximately half of it for construction purposes The construction industry is responsible for an estimated third of global waste while reuse of construction materials is not increasing fast enough The same sector accounts for at least 40 per cent of global carbon dioxide emissions There is thus an urgent need to showcase how novel approaches in digital fabrication might be able to enhance the sustainability of buildings and transform construction Featuring specialists from architecture engineering and materials science this AD presents innovative research and new construction systems approaches and trends to demonstrate how existing methods and unique concepts that utilise cutting edge technologies can in a short space of time help us advance towards a culture of sustainable construction It focuses on digital design and manufacturing including XR technologies and highlights unique ways to build with earth or concrete Contributors Fabio Amicarelli Ana Anton and Benjamin Dillenburger Tobias Bonwetsch and Tobias Huber Mario Carpo Sasha Cisar Jelle Feringa Corentin Fivet Abel Gawel Fabio Gramazio and Matthias Kohler Norman Hack Silke Langenberg Sarah M Schlachetzki and Robin Rehm Daniela Mitterberger and Kathrin Dröfler Romana Rust and Inés Ariza and Timothy Wangler Yamini Patankar and Robert J Flatt Featured architects Terrestrial and Rematter AG

1:1 Architecture and Digital Fabrication Fabio Gramazio, 2007 *Homing the Machine in Architecture* Galo Canizares, Zach Cohen, 2024-03-11 Homing the Machine in Architecture is a series of conversations on the ways designers practitioners historians and theorists orient themselves within the world of architectural digital fabrication To home a digital fabrication machine is to send it back to its origin point a point that can be specified by the fabricator in advance of the fabrication process or by the defaults that are pre programmed into the machine The homing process is necessary and productive since it determines the physical point at which the machine and the maker begin making every time that architectural designers begin to digitally fabricate something new they first need to home the machine This book gathers first and second hand accounts of the origins of individual digi fab practices from the emergence of advanced prototyping tools to the contemporary moment It features interviews essays and case studies organized around three questions What are the possible histories of digital fabrication in architecture How do designers orient themselves in this emergent discipline What conceptual original points do architectural designers return to when they home their machines The discourse that emerges from this collection aims to reach practicing architects using digital

fabrication as well as upper level students and academics of digital architecture architectural theory and architectural history
