Digital Design Using VHDL William J. Dally, R. Curtis Harting, Tor M. Aamodt, 2016. Provides students with a system level perspective and the tools they need to understand, analyze, and design complete digital systems using VHDL. It goes beyond the design of simple combinational and sequential modules to show how such modules are used to build complete systems reflecting digital design in the real world.

Extreme Low-Power Mixed Signal IC Design Armin Tajalli, Yusuf Leblebici, 2010-09-14. Design exibility and power consumption in addition to the cost have always been the most important issues in design of integrated circuits ICs and are the main concerns of this research as well. Energy Consumptions Power dissipation P and energy consumption are especially important when there is a limited amount of power budget or limited source of energy. Very common examples are portable systems where the battery life time depends on system power consumption. Many different techniques have been developed to reduce or manage the circuit power consumption in this type of systems. Ultra low power ULP applications are another examples where power dissipation is the primary design issue. In such applications the power budget is so restricted that very special circuit and system level design techniques are needed to satisfy the requirements. Circuits employed in applications such as wireless sensor networks WSN, wearable battery powered systems, and implantable circuits for biological applications need to consume very low amount of power such that the entire system can survive for a very long time without the need for changing or recharging battery.

4. Using new power supply techniques such as energy harvesting, 5 and printable batteries, 6 is another reason for reducing power dissipation. Developing special design techniques for implementing low power circuits, 7-9 as well as dynamic power management DPM schemes, 10 are the two main approaches to control the system power consumption.

Design Flexibility
Design exibility is the other important issue in modern integrated systems.
