Design And Analysis Of Ecological Experiments:

Design and Analysis of Ecological Experiments Sam Scheiner, 2020-07-24 The goal of this book is to make some underutilized but potentially very useful methods in experimental design and analysis available to ecologists and to encourage better use of standard statistical techniques Ecology has become more and more an experimental science in both basic and applied work but experiments in the field and in the laboratory often present formidable statistical difficulties Organized around providing solutions to ecological problems this book offers ways to improve the statistical aspects of conducting manipulative ecological experiments from setting them up to interpreting and reporting the results An abundance of tools including advanced approaches are made available to ecologists in step by step examples with computer code provided for common statistical packages This is an essential how to guide for the working ecologist and for graduate students preparing for research and teaching careers in the field of ecology *Design and Analysis Ecological Experiments*

J. Underwood, 1997 Examples of

ecological experiments are used throughout to illustrate the procedures and examine problems This book will be invaluable to practising ecologists in addition to advanced students involved in experimental design **EXPERIMENTS IN ECOLOGY: THEIR LOGICAL DESIGN AND INTERPRETATION USING ANALYSIS OF VARIANCE**, 1997 First published in 1996 this book is a logical and consistent approach to experimental design using statistical principles

Experimental Design and Data Analysis for Biologists Gerald Peter Quinn, Michael J. Keough, 2002-03-21 An essential

textbook for any student or researcher in biology needing to design experiments sample programs or analyse the resulting data The text begins with a revision of estimation and hypothesis testing methods covering both classical and Bayesian philosophies before advancing to the analysis of linear and generalized linear models Topics covered include linear and logistic regression simple and complex ANOVA models for factorial nested block split plot and repeated measures and covariance designs and log linear models Multivariate techniques including classification and ordination are then introduced Special emphasis is placed on checking assumptions exploratory data analysis and presentation of results The main analyses are illustrated with many examples from published papers and there is an extensive reference list to both the statistical and biological literature The book is supported by a website that provides all data sets questions for each chapter and links to software
