Different Faces Of Attachment Cultural Variations On A Universal Human Need:

Different Faces of Attachment Hiltrud Otto, Heidi Keller, 2014 Attachment between an infant and his or her parents is a major topic within developmental psychology. An increasing number of psychologists, evolutionary biologists, and anthropologists are articulating their doubts that attachment theory in its present form is applicable worldwide without, however, denying that the development of attachment is a universal need. This book brings together leading scholars from psychology, anthropology, and related fields to reformulate attachment theory in order to fit the cultural realities of our world. Contributions are based on empirical research and observation in a variety of cultural contexts. They are complemented by careful evaluation and deconstruction of many of the underlying premises and assumptions of attachment theory and of conventional research on the role of infant-parent attachment in human development. The book creates a contextual cultural understanding of attachment that will provide the basis for a groundbreaking reconceptualization of attachment theory.

The Cultural Nature of Attachment Heidi Keller, Kim A. Bard, 2017-10-27 Multidisciplinary perspectives on the cultural and evolutionary foundations of children's attachment relationships and on the consequences for education, counseling, and policy. It is generally acknowledged that attachment relationships are important for infants and young children, but there is little clarity on what exactly constitutes such a relationship. Does it occur between two individuals: infant-mother or infant-father, or in an extended network? In the West, monotropic attachment appears to function as a secure foundation for infants, but is this true in other cultures? This volume offers perspectives from a range of disciplines on these questions. Contributors from psychology, biology, anthropology, evolution, social policy, neuroscience, information systems, and practice describe the latest research on the cultural and evolutionary foundations of children's attachment relationships, as well as the implications for education, counseling, and policy. The contributors discuss such issues as the possible functions of attachment, including trust and biopsychological regulation; the evolutionary foundations; if any, of attachment; ways to model attachment using the tools of information science; the neural foundations of attachment; and the influence of cultural attitudes on attachment. Taking an integrative approach, the book embraces the wide cultural variations in attachment relationships in humans and their diversity across nonhuman primates. It proposes research methods for the culturally sensitive study of attachment networks that will lead to culturally sensitive assessments, practices, and social policies. Learning Without Lessons David F. Lancy, 2024-01-09 In *Learning Without Lessons* David F Lancy offers the first attempt to review the principles and practices for fostering learning in children that are found in small scale pre industrial communities across the globe and through history His analysis yields a consistent and coherent pedagogy that can be contrasted sharply with the taken for granted pedagogy found in the West His analysis finds that teachers classrooms lessons verbal instruction testing grading praise and the use of symbols are rare or absent from indigenous pedagogy Instead field studies document the prevalence of self guided learners who rely on observation listening learning in play from peers the hands on use of real tools and learning through voluntary participation in everyday activities such as foraging

Childhood and Adolescence Uwe P. Gielen, Jaipaul L. Roopnarine, 2016-01-11 This comprehensive reference analyzes psychological and anthropological studies concerning child and adolescent development across cultures digging into often forgotten topics like street children child soldiers and parenting in war torn countries Traditionally research on child and adolescent development

has focused on American youth inadvertently neglecting 96 percent of the world's children. This all-encompassing volume introduces global perspectives on young people across the globe focusing on such topics as parenting and childcare, gender roles, violence against girls, adolescence in poor and rich countries, and developmental psychopathology across cultures. Recently updated, the second edition includes the latest findings in the field, additional content, and new photos and charts. With contributions from leading psychological and anthropological scholars, chapters address worldwide changes in children's lives, parent-child relationships, sibling relationships, immigrant children and their families, and adolescents in both industrialized and developing nations. A special section discusses children living in difficult circumstances, including street children, child soldiers, global nomads, and children suffering from various internalizing and externalizing disorders. This book is the perfect introduction to the latest trends in developmental psychology.

Childhood Courtney L. Meehan, Alyssa N. Crittenden, 2016-05-01. This collection is the first to specifically address our current understanding of the evolution of human childhood, which in turn significantly affects our interpretations of the evolution of family formation, social organization, cultural transmission, cognition, ontogeny, and the physical and socioemotional needs of children. Moreover, the importance of studying the evolution of childhood has begun to extend beyond academic modeling and into real-world applications for maternal and child health and well-being in contemporary populations around the world. Combined, the chapters show that what we call childhood is culturally variable yet biologically based and has been critical to the evolutionary success of our species. The significance of integrating childhood into models of human life history and evolution cannot be overstated. This volume further demonstrates the benefits of interdisciplinary investigation and is sure to spur further interest in the field.

The Anthropology of Childhood David F. Lancy, 2022-03-10. How are children raised in different cultures? What is the role of children in society? How are families and communities structured around them? Now in its third edition, this deeply engaging book delves into these questions by reviewing and cataloging the findings of over 100 years of anthropological scholarship dealing with childhood and adolescence. It is organized developmentally, moving from infancy through to adolescence and early adulthood, and enriched with anecdotes from ethnography and the daily media to paint a nuanced and credible picture of childhood in different cultures, past and present. This new edition has been expanded and updated with over 350 new sources and introduces a number of new topics, including how children learn from the environment, middle childhood, and how culture is transmitted between generations. It remains the essential book to read to understand what it means to be a child in our complex, ever-changing world.
