Ocean For hundreds of thousands of years large parts of the Arctic Ocean were covered by ice all year around Many animals such as polar bears Arctic foxes seals fish and birds and even some people have made this icy place their home They have learned to live with the ice and some animals even need it to live But recently things in the Arctic have been changing You have probably already heard a lot about Climate Change Climate Change impacts the long term weather climate everywhere on our planet Many areas get warmer some get colder and everywhere we see more extreme or unusual weather such as storms floods or droughts But nowhere is Climate Change happening as fast as in the Arctic You might have also heard about the 2 C goal This is a goal that many governments around the world have agreed to The plan is essentially to make sure the average global warming of our atmosphere stays at less than 2 C compared to what people like to call pre industrial time the year 1948 is used as a reference Right now most of the world is at around 0.8 C warming In the Arctic we are already at 2.3 C warming that is 0.3 C above what should be the absolute maximum according to the 2 C goal Now you probably ask why it is so bad that the Arctic is getting a bit warmer That should make it a nicer place to live right Unfortunately the warm temperature means that the ice that has covered the Arctic Ocean for all this time is melting It looks like that will change the Arctic Ocean forever and with it the animals and people that call the Arctic their home In this collection we want to tell you what we as scientists know about the changes in the Arctic how we investigate these changes and what we have learned from our travels to the Arctic and the analyses we do in our research institutes We will tell you about how the higher temperatures in the Arctic change the ice How very tiny animals can have a huge impact We want to introduce you to life in the ice under the ice and at the seafloor We will talk about processes that make the Arctic Ocean so special and chemicals that can travel from our homes and cities all the way to the Arctic

[Antarctica and the Southern Ocean](#) Nicholas Golledge,Eileen Hofmann,Marilyn Raphael ,Letizia Tedesco,2024-06-26 Antarctica is our southernmost continent It is nearly double the size of Australia Antarctica is covered almost entirely by land ice called the Antarctic Ice Sheet and is surrounded by the Southern Ocean The Southern Ocean influences climate by taking up heat and carbon dioxide from the atmosphere and storing it in deep waters The cloud processes and aerosols over the Southern Ocean are complex and are important challenges for climate models To understand the climate of the past polar scientists drill ice

cores through the Antarctic Ice Sheet The ice core is a powerful tool that we can use to determine how the Earth's climate has changed and the information provided by historical ice cores has become extremely valuable for predicting the future scenarios of our planet This ice is the largest reservoir of fresh water on Earth The Antarctic Ice Sheet flows down into the Southern Ocean where parts of it start to float These large floating platforms of ice are called ice shelves Knowledge of the sensitivity and interaction of ice shelves to changes in atmosphere and ocean is important to understand the contribution of Antarctica to global sea level rise and the Southern Ocean and global marine ecosystems If melted the Antarctic Ice Sheet would be a major contributor to global sea level rise In winter the surface of the ocean around Antarctica freezes and sea ice forms At the height of winter the area of sea ice that forms is as large as Antarctica itself but it melts back to the continent every summer The amount of sea ice that forms in winter and melts back each summer is different We examine this annual fluctuation of sea ice area around Antarctica for indications of climate change Sea ice provides important habitats for primary producers such as sea ice algae and Antarctic krill a keystone species of the Southern Ocean ecosystem Sea ice is also an important habitat for penguins and seals This collection aims to inform young readers about fundamental knowledge and digested cutting edge science that will help increase their understanding of Antarctica and its central role as a global climate driver In addition to the Editors hosting we would acknowledge the coordination and organization efforts of Pat Wongpan
