Reading Comprehension Difficulties Cesare

Cornoldi, Jane V. Oakhill, 2013-04-03 Recognizing the characteristics of children with learning disabilities and deciding how to help them is a problem faced by schools all over the world Although some disorders are fairly easily recognizable e g mental retardation or very specific to single components of performance and quite rare e g developmental dyscalculia schools must consider much larger populations of children with learning difficulties who cannot always be readily classified These children present high level learning difficulties that affect their performance on a variety of school tasks but the underlying problem is often their difficulty in understanding written text In many instances despite good intellectual abilities and a superficial ability to cope with written texts and to use language appropriately some children do not seem to grasp the most important elements or cannot find the pieces of information they are looking for Sometimes these difficulties are not immediately detected by the teacher in the early school years They may be hidden because the most obvious early indicators of reading progress in the teacher's eyes do not involve comprehension of written texts or because the first texts a child encounters are quite simple and reflect only the difficulty level of the oral messages sentences short stories etc with which the child is already familiar However as years go by and texts get more complex comprehension difficulties will become increasingly

apparent and increasingly detrimental to effective school learning. In turn, studying, assimilating new information and many other situations requiring text comprehension from problem solving to reasoning with linguistic contents could be affected. Problems with decoding, dyslexia and language disorders have attracted more interest from researchers than have specific comprehension problems and have occupied more room in specialized journals. Normal reading comprehension has also been a favorite with researchers. However, scarce interest has been paid to subjects who have comprehension difficulties. This book is an attempt to remedy this situation. In so doing, this volume answers the following questions: Does a reading comprehension problem exist in schools? How important and widespread is the problem? Is the problem specific? How can a reading comprehension difficulty be defined and identified? Does the syndrome have a single pattern or can different subtypes be identified? What are the main characteristics associated with a reading comprehension difficulty? When can other well identified problems add to our understanding of reading comprehension difficulties? Which educational strategies are effective in preventing and treating reading comprehension difficulties? What supplementary information can we get from an international perspective?

Phonological Skills and Learning to Read Usha Goswami, Peter Bryant, 2016-03-23 This book sets out to integrate recent exciting research on the precursors of reading and early reading strategies adopted by children in the classroom. It aims to develop a theory about why early phonological skills are crucial in learning to read and shows how phonological knowledge about rhymes and other units of sound helps children learn about letter sequences when beginning to be taught to read. The authors begin by contrasting theories which suggest that children's phonological awareness is a result of the experience of learning to read and those that suggest that phonological awareness precedes and is a causal determinant of reading. The authors argue for a version of the second kind of theory and show that children are aware of speech units called onset and rime before they learn to read and spell. An important part of the argument is that children make analogies and inferences about these letter sequences in order to read and write new words. Normativity in Language and Linguistics Aleksis Mäkilähde, Ville Leppänen, Esa Itkonen, 2019-12-15 This volume sets out to discuss the role of norms and normativity in both language and linguistics from a multiplicity of perspectives. These concepts are centrally important to the philosophy and methodology of linguistics and their role and nature need to be investigated in detail. The chapters address a range of issues from general questions about ontology, epistemology and methodology to aspects of particular subfields such as semantics and historical linguistics or phenomena such as construal and code switching. The volume aims to further our understanding of language and linguistics as well as to encourage further discussion on the metatheory of linguistics. Due to the fundamental nature of the issues under discussion, this volume will be of interest to all linguists regardless of their background or fields of expertise and to philosophers concerned with language or other normative domains.
