Human Body- Digestion

Stomach	Liver	Pancreas
When you eat food, it goes from your mouth, through the esophagus, and into your stomach.	Makes the digestive juice called bile.	Produces insulin which regulates blood sugar.
The muscles in your stomach churn the food and mix it with special digestive juices. Which breaks down food.	Filters blood coming from digestive tract. (detoxifies chemicals and metabolizes medicine)	Makes digestive juices and it converts the food we eat into fuel for the body's cells.
		
Small Intestine	Large Intestine	
The small intestine uses the digestive juices from the liver and pancreas and finishes digesting the food.	Your large intestine removes water from the material sent by your small intestine.	
Nutrients from this digested food move into your blood.	The water moves into your blood.	
Materials that your body does not need are moved into your large intestine.	The solid wastes move into your rectum, and out of your body.
