thorough explanation of the principles and methods used to analyse the vibrations of engineering systems combined with a
description of how these techniques and results can be applied to the study of control system dynamics Numerous worked
examples are included as well as problems with worked solutions and particular attention is paid to the mathematical
modelling of dynamic systems and the derivation of the equations of motion All engineers practising and student should have
a good understanding of the methods of analysis available for predicting the vibration response of a system and how it can be
