Electromechanical Transmitters for ELF/VLF Radio Jarred S.

Glickstein, Soumyajit Mandal, 2022-11-02 This book describes a new extremely low frequency ELF very low frequency VLF miniaturized transmitter concept based on the mechanical motion of permanent magnets or electrets The authors explain how utilizing the very high energy density of modern ferromagnetic and ferroelectric materials such electromechanical transmitters can provide much higher field generation efficiency than conventional antennas thus enabling practical ELF VLF wireless communications links The text begins with the fundamental challenges of such links and provides an historical overview of the attempts that have been made to address these challenges It then focuses on the design and implementation of practical electromechanical ELF VLF transmitters which is an interdisciplinary subject that spans multiple research areas including electromagnetics power electronics control systems and mechanical design The authors also describe how such transmitters can be combined with receivers and signal processing algorithms to realize complete ELF VLF links in

challenging environments **Digital and Analog Communication Systems** Leon W. Couch, 2013 For junior to senior level introductory communication systems courses for undergraduates or an introductory graduate course A useful resource for electrical engineers This revision of Couch's authoritative text provides the latest treatment of digital communication systems The author balances coverage of both digital and analog communication systems with an emphasis on design Readers will gain a working knowledge of both classical mathematical and personal computer methods to analyze design and simulate modern communication systems MATLAB is integrated throughout

The Standardized Coordination Task Assessment (SCTA) Oemig, Christoph, 2023-02-06 Today's modern world often affords individuals to form teams to work together towards shared goals and objectives The need for tools to digitally support collaboration distributed in time and space increased over the past decades significantly with a recent sudden increase due to the Corona pandemic crisis The research goal in the field of computer supported cooperative work CSCW has always been to design systems that facilitate collaboration based on the understanding of groups and social interaction especially on how people coordinate their work In the real world coordination happens in a seemingly seamless and effortless way However the resulting mechanisms translated to digital systems often provide a clumsy and awkward experience as users lack the means for subtle and rich interaction beyond the spoken word After numerous failures revealing system deficits and a large number of ethnographic studies researchers identified awareness to become the support mechanism for effortless coordination in digital systems Yet instead of addressing the problem using appropriate methods and tools researchers found themselves trapped in circular reformulations of concepts and evaluations of prototypes on the basis of disciplinary preferences ignoring the basic characteristics of the objects of interest Even worse the most basic design tensions stemming from a use inspired perspective have not been resolved indicating a substantial problem with the evaluation of awareness and coordination support Effortless coordination cannot be reached without being measured thus not without an appropriate measurement approach This thesis

introduces an appropriate assessment method for the efforts related to awareness and coordination support in cooperative settings the STANDARDIZED COORDINATION TASK ASSESSMENT SCTA Applying a use inspired basic research driven approach it creates and leverages an effort based operationalization of the two constructs derived from literature and especially from a cognitive perspective A highly automated and scalable framework delivers quantitative results to be used for hypotheses validations that allows a benchmark based approximation of effortless coordination At the same time the method opens the door for a lot more use inspired basic research to resolve many of the still open design tensions and challenges
