Digital Fabrications Lisa Iwamoto, 2013-07-02 Digital Fabrications the second volume in our new Architecture Briefs series celebrates the design ingenuity made possible by digital fabrication techniques Author Lisa Iwamoto explores the methods architects use to calibrate digital designs with physical forms The book is organized according to five types of digital fabrication techniques tessellating sectioning folding contouring and forming Projects are shown both in their finished forms and in working drawings templates and prototypes allowing the reader to watch the process of each fantastic construction unfold Digital Fabrications presents projects designed and built by emerging practices that pioneer techniques and experiment with fabrication processes on a small scale with a do it yourself attitude Featured architects include AEDS Ammar Eloueini Atelier Manferdini Brennan Buck MOS Office dA Florencia Pita MOD Mafoomby URBAN A O SYSTEM architects Andrew Kudless Matsys Iwamoto Scott Atelier Hitoshi Abe Chris Bosse Tom Wiscombe EMERGENT Thom Faulders Architecture Jeremy Ficca SPAN GNUFORM Heather Roberge PATTERNS Ruy Klein and servo **Matter:**

Material Processes in Architectural Production Gail Peter Borden, Michael Meredith, 2012-03-29 Beginning with material this book revolves around physical material making and design decisions that emerge from material interaction Combining essays from both practice and academia this book presents some of the most significant projects and thoughts on materiality from the last decade Beautifully illustrated with a great deal of technical information throughout it shows work technical technique and process and positions it within a broader theoretical intention By assembling a range of voices here is a multifaceted portrait of material design today Students and design professionals alike should find in this book an essential resource for understanding this increasingly important aspect of design **Handbook of Research on Visual Computing**

and Emerging Geometrical Design Tools Amoroso, Giuseppe, 2016-04-11 Visual computing and descriptive geometry are multidisciplinary fields addressing the handling of images 3D models and other computer graphics These ideas are experiencing a revival due to emergent technologies and applications available to developers Based in traditional forms of design and architecture these fields are currently experiencing a bounty of new research based on old principles The Handbook of Research on Visual Computing and Emerging Geometrical Design Tools seeks to add to this knowledge base by considering these technologies from a designer's perspective rather than reiterating the principles of computer science It combines aspects of geometry and representation with emerging tools for CAD generation and visualization while addressing the digital heritage of such fields This book is an invaluable resource for developers students of both graphic and computer generated design researchers and designers Digital Architecture and Construction A. Ali, C. A. Brebbia, 2006 Digital Architecture is a particularly dynamic field that is developing through the work of architecture schools architects software developers researchers technology users and society alike Featuring papers from the First International Conference on Digital Architecture this book will be of interest to professional and academic architects involved in the creation of new

Innovative tools and design strategies. The case of Eclectic Architecture in Buenos Aires Garrido, Federico Andrés, 2023-05-26 The research deals with a question about Architecture and its design strategies combining historical information and digital tools Design strategies are historically defined they rely on geometry context building technologies and other factors The study of Architecture's own history particularly in the verge of technological advancements like the introduction of new materials or tools may shed some light on how to internalize digital tools like parametric design and digital fabrication *Nexus Network Journal* 14,3 Kim Williams, 2014-03-07 The Winter 2012 vol 14 no 3 issue of the Nexus

Wiertelarz, 2016-01-01 Computational methods in design practice are powerful tools for solving highly constrained problems and for refining existing design solutions Algorithmic tools can help in the design process and significantly extend the range of possible solutions The automation of many routines and the repetitive activities of the design process both provide a release for an architect allowing him or her more time to think about the design The main goal of this research study is to explore the potential of parametric modeling for dynamically resolving and controlling the particular conditions of the design and manufacturing processes The vision is to be able to approach this process in general by way of several design systems for the construction of architectural models and finally to build up life sized solutions Digital Wood Design Fabio Bianconi, Marco Filippucci, 2019-02-24 This book explores various digital representation strategies that could change the future of wooden architectures by blending tradition and innovation Composed of 61 chapters written by 153 authors hailing from 5 continents 24 countries and 69 research centers it addresses advanced digital modeling with a particular focus on solutions involving generative models and dynamic value inherent to the relation between knowing how to draw and how to build Thanks to the potential of computing areas like parametric design and digital manufacturing are opening exciting new avenues for the future of construction The book's chapters are divided into five sections that connect digital wood design to integrated approaches and generative design to model synthesis and morphological comprehension to lessons learned from nature and material explorations to constructive wisdom and implementation related challenges and to parametric transfigurations and morphological optimizations
