Mapping Biology Knowledge K. Fisher, J.H. Wandersee, D.E. Moody, 2006-04-11 *Mapping Biology Knowledge* addresses two key topics in the context of biology promoting meaningful learning and knowledge mapping as a strategy for achieving this goal. Meaning making and meaning building are examined from multiple perspectives throughout the book. In many biology courses students become so mired in detail that they fail to grasp the big picture. Various strategies are proposed for helping instructors focus on the big picture using the need to know principle to decide the level of detail students must have in a given situation. The metacognitive tools described here serve as support systems for the mind creating an arena in which learners can operate on ideas. They include concept maps, cluster maps, webs, semantic networks, and conceptual graphs. These tools compared and contrasted in this book are also useful for building and assessing students' content and cognitive skills. The expanding role of computers in mapping biology knowledge is also explored. *Handbook of Academic Learning* Gary D. Phye, 1997-01-08 *The Handbook of Academic Learning* provides a comprehensive resource for educational and cognitive psychologists as well as educators themselves on the mechanisms and processes of academic learning. Beginning with general themes that cross subject and age level, the book discusses what motivates students to learn and how knowledge can be made personal for better learning and remembering. Individual chapters identify proven effective teaching methods for the specific domains of math, reading, writing, science, and critical problem solving; how students learn within those domains; and how learning can be accurately assessed for given domains and age levels. The Handbook takes a constructivist perspective to academic learning, emphasizing the construction of personal knowledge of an academic nature. Constructivism within the context of learning theory is viewed as involving an active learner that constructs an academic knowledge base through the development of cognitive strategies and metacognition. The book discusses the development of basic literacy skills that provide the foundation for higher order thinking and problem solving. Constructivism recognizes the social dimension of classroom learning and emphasizes the motivational elements of self-regulation and volition as essential learner characteristics. Written by authors who have first-hand experience with both theory development and the development of authentic classroom instructional techniques, the Handbook empowers educators to develop, implement, and field test authentic instructional practices at their school site. The book provides a review of the literature, theory, research, and skill techniques for effective teaching and learning. Identifies effective teaching with specific techniques. Covers elementary school through high school. Discusses teaching methods for all main subject areas: reading, writing, math, science, and critical thinking. Identifies how students learn to learn. Reviews theory, research, techniques, and assessment. Contains field-tested examples for the educational professional at the school site. Provides a resource for staff development. *Teaching Science for Understanding* Joel J. Mintzes, James H. Wandersee, Joseph D. Novak, 2005-02-21 *Teaching Science for Understanding*
