The Modelling of Microstructure and its Potential for Studying Transport Properties and Durability H.

Jennings,Jörg Kropp,Karen Scrivener,2013-04-17 From July 10th through July 13th 1994 an informal workshop co organized by RILEM committees 116 PCD and 123 MME was held at Saint Remy les Chevreuse France and attended by 38 delegates from 16 countries Twenty nine papers were presented converging the general subjects of modelling micro structures and predicting durability of concrete and other cement based materials A short summary follows G M Idom s paper entitled Modelling Research for Concrete Engineering serves as an introduction to the workshop presenting an overview of modelling research with the conclusion that the broad practical objective is to produce high quality concrete This means that many characteristics ranging from rheology to alkali silica reaction must be modelled In other words the system must be understood Idom s paper sets the stage for papers in two general areas 1 models and 2 transport properties After this abrief survey of the develop ment of microstructurally based models is presented A elose relationship between computer power and speed is suggested The first group of papers on models covers the subjects of scale and resolution Most models define and predict characteristics of the pore system which range in scale from nanometer to millimeter Various types of networks are proposed in these papers A good microstructural model must describe the pores and other phases at a scale appropriate to the properties that the model predicts Also a good model should be based on fundamental knowledge In the case of cement based materials the important properties may depend on the microstructure especially the porosity at several scales
