Debris Flowsavalanches Process Recognition And Mitigation Reviews In Engineering Geology:

NOAA-USGS Debris-Flow Warning System--final Report NOAA-USGS Debris Flow Task Force,2005 **Hydrology of Disasters** V.P. Singh,2012-12-06 The General Assembly of the United Nations passed a resolution on December 11 1987 designating the 1990s as the International Decade for Natural Disaster Reduction This resolution has served as a catalyst in promotion of international cooperation in the field of natural disaster reduction in initiation of wide ranging research activities on natural and man made disasters in development of tech nologies for assessment prediction prevention and mitigation through technical assistance technology transfer demonstration projects and education and training and in dissemination of information related to measures for assessment prediction prevention and mitigation of natural disasters Disasters are manifestations of environmental extremes Depending upon the type of disasters their occurrence may have short term andlor long term detri mental environmental consequences Disasters cannot be prevented altogether but their impact can be mitigated This book is an attempt to provide a discussion of hydrological aspects of the various types of natural disasters It is hoped that others will be stimulated to write more comprehensive texts on this subject of enormous importance

U.S. Geological Survey Professional Paper ,1984 **Catastrophic Landslides** Stephen G. Evans,Jerome V. DeGraff,2002-01-01 This volume documents advances in our knowledge of catastrophic landslides providing a worldwide survey of catastrophic landslide events It draws on South America to illustrate dramatically the impact of these phenomena on human populations The occurrence of catastrophic landslides including site specific insights is shown through six events of the past 20 years Several other chapters focus on the mechanisms involved with catastrophic landslides both in relation to geologic factors in a particular geographic area as well as to specific geologic processes **Treatise on Geomorphology** ,2013-02-27 The changing focus and approach of geomorphic research suggests that the time is opportune for a summary of the state of discipline The number of peer reviewed papers published in geomorphic journals has grown steadily for more than two decades and more importantly the diversity of authors with respect to geographic location and disciplinary background geography geology ecology civil engineering computer science geographic information science and others has expanded dramatically As more good minds are drawn to geomorphology and the breadth of the peer reviewed literature grows an effective summary of contemporary geomorphic knowledge becomes increasingly difficult The fourteen volumes of this Treatise on Geomorphology will provide an important reference for users from undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic Information on the historical development of diverse topics within geomorphology provides context for ongoing research discussion of research strategies equipment and field methods laboratory experiments and numerical simulations reflect the multiple approaches to understanding Earth s surfaces and summaries of outstanding research questions highlight future challenges and suggest productive new avenues for research Our future ability to adapt

to geomorphic changes in the critical zone very much hinges upon how well landform scientists comprehend the dynamics of Earth's diverse surfaces. This Treatise on Geomorphology provides a useful synthesis of the state of the discipline as well as highlighting productive research directions that Educators and students/researchers will find useful. Geomorphology has advanced greatly in the last 10 years to become a very interdisciplinary field. Undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic will find the answers they need in this broad reference work which has been designed and written to accommodate their diverse backgrounds and levels of understanding. Editor in Chief Prof J F Shroder of the University of Nebraska at Omaha is past president of the QGG section of the Geological Society of America and present Trustee of the GSA Foundation while being well respected in the geomorphology research community and having won numerous awards in the field. A host of noted international geomorphologists have contributed state of the art chapters to the work. Readers can be guaranteed that every chapter in this extensive work has been critically reviewed for consistency and accuracy by the World expert Volume Editors and by the Editor in Chief himself. No other reference work exists in the area of Geomorphology that offers the breadth and depth of information contained in this 14 volume masterpiece. From the foundations and history of geomorphology through to geomorphological innovations and computer modelling and the past and future states of landform science, no stone has been left unturned.

Water-resources Investigations Report, 1995 Geological Survey of Canada, Open File 2522, *The Use of Historical Data in Natural Hazard Assessments* Thomas Glade, Paola Albini, Félix Francés, 2001-11-30. This book highlights the use of historical data in natural hazard assessments. Different types of data such as historical data from written documents are linked to technically measured data such as stream gauge height and consequently river discharge in order to archive new possibilities of probability determination of respective hazardous processes. In addition, this book strengthens this interdisciplinary approach through the application to different processes of earthquakes, floods and landslides. Based on worldwide examples, the book introduces how various disciplines address the use of historical data in their respective analysis. These studies might give suggestions of new approaches in their own field derived from applications shown by other disciplines. Audience: This volume is of particular interest to professionals interested and involved in natural hazard assessments working at research institutions and organisations large and small, scale enterprises, governmental agencies as well as private personnel. However, also advanced students might find the book helpful in addressing specific issues raised in natural hazard courses.
