

Poverty is a complex and multidimensional phenomenon. The poor are not a homogeneous group. Various approaches to defining poverty can lead to identification of different groups of poor. Therefore, a holistic approach is needed to deal with the problem of poverty. However, countries with widespread poverty face financial and other resource constraints. This may require setting priorities in terms of dealing with various dimensions of poverty, which may not be easy given the fact that various dimensions of poverty are closely linked with each other. Therefore, it is a daunting challenge for each country to formulate an effective poverty reduction strategy according to its own needs and circumstances. In line to this fact poverty is multidimensional, the unidimensional approach is not always sufficient to account for all the facets of this phenomenon. A multidimensional analysis therefore becomes necessary if we truly want to identify the poor, as well as the strategies to combat this burden.

Quantitative Approaches to Multidimensional Poverty Measurement N. Kakwani, J. Silber, 2008-02-21 This book is written in light of the latest developments in the field of multidimensional poverty measurement It includes clear presentations of more than a dozen different quantitative techniques and provides empirical illustrations based on data sources from developed or developing countries

Analysis of Socio-Economic Conditions Gianni Betti, Achille Lemmi, 2021-03-30 Showcasing fuzzy set theory this book highlights the enormous potential of fuzzy logic in helping to analyse the complexity of a wide range of socio economic patterns and behaviour The contributions to this volume explore the most up to date fuzzy set methods for the measurement of socio economic phenomena in a multidimensional and or dynamic perspective Thus far fuzzy set theory has primarily been utilised in the social sciences in the field of poverty measurement These chapters examine the latest work in this area while also exploring further applications including social exclusion the labour market educational mismatch sustainability quality of life and violence against women The authors demonstrate that real world situations are often characterised by imprecision uncertainty and vagueness which cannot be properly described by the classical set theory which uses a simple true false binary logic By contrast fuzzy set theory has been shown to be a powerful tool for describing the multidimensionality and complexity of social phenomena This book will be of significant interest to economists statisticians and sociologists utilising quantitative methods to explore socio economic phenomena

Measuring Poverty and Wellbeing in Developing Countries Channing Arndt, Finn Tarp, 2016-12-15 This is an open access title available under the terms of a CC BY NC SA 3.0 IGO licence It is free to read at Oxford Scholarship Online and offered as a free PDF download from OUP and selected open access locations Detailed analyses of poverty and wellbeing in developing countries based on household surveys have been ongoing for more than three decades The large majority of developing countries now regularly conduct a variety of household surveys and the information base in developing countries with respect to poverty and wellbeing has improved dramatically Nevertheless appropriate measurement of poverty remains complex and controversial This is particularly true in developing countries where i the stakes with respect to poverty reduction are high ii the determinants of living standards are often volatile and iii related information bases while much improved are often characterized by significant non sample error It also remains to a surprisingly high degree an activity undertaken by technical assistance personnel and consultants based in developed countries This book seeks to enhance the transparency replicability and comparability of existing practice In so doing it also aims to significantly lower the barriers to entry to the conduct of rigorous poverty measurement and increase the participation of analysts from developing countries in their own poverty assessments The book focuses on two domains the measurement of absolute consumption poverty and a first order dominance approach to multidimensional welfare analysis In each domain it provides a series of flexible computer codes

designed to facilitate analysis by allowing the analyst to start from a flexible and known base The book volume covers the theoretical grounding for the code streams provided a chapter on estimation in practice a series of 11 case studies where the code streams are operationalized as well as a synthesis an extension to inequality and a look forward Child Welfare in Developing Countries John Cockburn, Jane Kabubo-Mariara, 2010-08-09 to establish impact attributing observed changes in welfare to the intervention while identifying key factors of success Impact evaluations are aimed at providing feedback to help improve the design of programs and policies They also provide greater accountability and a tool for dynamic learning allowing policymakers to improve ongoing programs and ultimately better allocate funds across programs Such a causal analysis is essential for understanding the relative role of alternative interventions in reducing poverty The papers in this section again adopt a variety of techniques The first two impact evaluation studies employ propensity score matching to establish ex post a valid control group to assess the impact on child schooling outcomes among beneficiaries of various interventions in Kenya and Ethiopia The third chapter carries out an ex ante evaluation of alternative cash transfer programs on child school attendance in Uruguay The final paper further carries out in depth macro modeling and micro regression analysis to simulate the impacts of the food crisis and various policy responses including food subsidies and cash transfers on various dimensions of child poverty in Mali Though using different approaches the studies are generally in agreement concerning the positive impact of the cash transfer program on child schooling and labor market outcomes The studies from Kenya and Uruguay both find that the schooling interventions are progressive *China's War against the Many Faces of Poverty* Jing Yang, Pundarik Mukhopadhaya, 2016-03-10 China's War against the Many Faces of Poverty measures multidimensional poverty in China and deprivation related to income education health issues living standards and social security The book adopts a well developed methodology using three different empirical datasets to analyse aspects of regional diversity across rural and urban and migrant populations of China The book also analyses the links between development policies considered by the government and the various facets of poverty in light of rapid economic growth and addresses important policy implications In the existing literature in depth research on multidimensional poverty in China is almost non-existent This book is a pioneer study in this important field of research With its innovative approach in concepts and methodologies and in its analysis of policy implications make this book a definitive and valuable addition to the literature

Handbook of Income Distribution Anthony B. Atkinson, Francois Bourguignon, 2014-12-30 What new theories evidence explanations and policies have shaped our studies of income distribution in the 21st century Editors Tony Atkinson and Francois Bourguignon assemble the expertise of leading authorities in this survey of substantive issues In two volumes they address subjects that were not covered in Volume 1 2000 such as education health and experimental economics and subjects that were covered but where there have been substantial new developments such as the historical study of income inequality and globalization Some chapters discuss future growth areas such as inheritance the links between inequality and macro

economics and finance and the distributional implications of climate change They also update empirical advances and major changes in the policy environment The volumes define and organize key areas of income distribution studies Contributors focus on identifying newly developing questions and opportunities for future research The authoritative articles emphasize the ways that income mobility and inequality studies have recently gained greater political significance

Poverty and Development in China Caizhen Lu,2013-03-01 China has made huge economic strides in recent decades but poverty is still a major issue on the agenda for rural China Poverty and Development in China analyses how poverty is recognized and measured and how people in poverty are identified literally asking who is poor in China Lu Caizhen s research compares four approaches to poverty assessment China s official poverty identification method the participatory approach to poverty assessment the monetary approach and use of multidimensional poverty indicators Each of these is applied to the same population of households to identify the poor in rural Wuding County Yunnan Province The analysis shows that there is in fact very little overlap of households identified as poor by the various means and that choice of approach does matter in the outcome of who is identified as poor This has implications at the theoretical methodological and policy levels Lu discusses these in detail concluding that at present there is a need to shift away from poverty reduction strategies that narrowly emphasize income generation activities as these are often short term efforts Instead the focus should move towards a broader combination of short term and long term strategies to break poverty s inter linked structural causes

Research Handbook on Measuring Poverty and Deprivation Jacques Silber,2023-03-02 Encompassing chapters that address both unidimensional and multidimensional poverty this timely Research Handbook explores all aspects of poverty and deprivation measurement not only detailing broad issues but also scrutinising specific domains and aspects of poverty such as health energy and housing Its succinct and highly focussed chapters written by a diverse range of authors employ a combination of theoretical and empirical methodologies to offer well rounded explorations of complex topics

Poverty and Social Exclusion around the Mediterranean Sea Valerie Berenger,Florent Bresson,2012-11-15 The events taking place in several of South Mediterranean countries since December 2010 show that multiple deprivations may be powerful drivers of political instability Though improvements of the living conditions have been regularly principal demands along with civil and political liberties in the demonstrations one of the main striking facts about this so called Arab Spring is that poverty had not been given the same emphasis in southern Mediterranean countries during the last decades as in other areas of the developing and emerging world Although the growing recognition that poverty is a multidimensional concept studies of poverty in South Mediterranean countries have often been dominated by a monetary approach However there is a growing evidence that it is suitable to go beyond the money metric measures of poverty and to supplement its results with other approaches that adopt a broader definition of well being Though poverty is only one of many causes of this Arab Spring we argue that it is a key feature to understand these historic events and that it is necessary to draw a detailed picture of poverty

and social exclusion for each one of these countries Moreover if the Union for the Mediterranean succeeds in fostering economic cooperation within the Mediterranean area the focus on the population s well being of its southern members will deserve scrutiny in the next few years to understand the forces that will drive the Euro Mediterranean relationships in particular for migration issues This book brings together recent advances on the measurement of poverty with empirical applications on South Mediterranean countries It introduces new tools for analyzing poverty and shows that the linkages between income and well being are not straightforward and hinge on many determinants It shows that the efficiency of poverty reducing policies should also be assessed on the basis of the satisfaction of non income needs like health education or participation in social life
