CHAPTER 1: DATABASES AND DATABASE USERS

Answers to Selected Exercises

1.8 - Identify some informal queries and update operations that you would expect to apply to the database shown in Figure 1.2.

Answer:

(a) (Query) List the names of all students majoring in Computer Science.

(b) (Query) What are the prerequisites of the Database course?

(c) (Query) Retrieve the transcript of Smith. This is a list of <CourseName, SectionIdentifier, Semester, Year, Grade> for each course section that Smith has completed.

(d) (Update) Insert a new student in the database whose Name=Jackson, StudentNumber=23, Class=1 (freshman), and Major=MATH.

(e) (Update) Change the grade that Smith received in Intro to Computer Science section 119 to B.

1.9 - What is the difference between controlled and uncontrolled redundancy?

Answer:

Redundancy is when the same fact is stored multiple times in several places in a database. For example, in Figure 1.5(a) the fact that the name of the student with StudentNumber=8 is Brown is stored multiple times. Redundancy is controlled when the DBMS ensures that multiple copies of the same data are consistent; for example, if a new record with StudentNumber=8 is stored in the database of Figure 1.5(a), the DBMS will ensure that StudentName=Smith in that record. If the DBMS has no control over this, we have uncontrolled redundancy.

1.10 - Specify all the relationships among the records of the database shown in Figure 1.2.

Answer:

(a) Each SECTION record is related to a COURSE record.

DATABASE SYSTEMS WITH CASE STUDIES BERNARD, MARGARET, BACHU, ESHWAR, 2015-10-04 Database Systems with Case Studies covers exactly what students need to know in an introductory database system course. This book focuses on database design and exposes students to a variety of approaches for getting the Data Model right. The book addresses issues related to database performance, Query Processing and Transaction Management for multi-user environments. This book also introduces non-relational XML format to students. The approach taken to teach the topics is through introduction of many real-world enterprise database case studies and practice problems. The case studies are selected based on modern application areas, keeping the student's interest in mind. The book provides hands-on experience of database design issues with several ready-made lab exercises. For grading students' understanding of the topics, several challenging assignments are also provided at the end of chapters. Multiple-choice self-tests are provided for formative assessment throughout the book. The book is suitable for the undergraduate students of Computer Science and Engineering, Information Technology, and students of Computer Applications, BCA, MCA. Key features: All the topics are illustrated with practical examples. Topics like Entity Relationship diagram, ERD are discussed with diagrams and visual aids. Students are exposed to the various approaches for determining data requirements. Structured Query Language (SQL) examples are worked with scripts, results, and solutions. Exclusive lab exercises on SQL can be used as assignments. Applications of Databases Witold Litwin, Tore Risch, 1994-06-06 This volume presents the proceedings of the First International Conference on Applications of Databases (ADB 94) held at Vadstena, Sweden, in June 1994. ADB 94 provided a unique platform for the discussion of innovative applications of databases among database researchers, developers, and application designers. The 28 refereed papers were carefully selected from more than 100 submissions. They report on DB applications for example in air traffic modelling, maps, environment, finance, engineering, electronic publishing, and digital libraries, and they are devoted to advanced database services as for example image, text, and multimedia modelling, fuzzy set based querying, knowledge management, heterogeneous multidatabase management, and intelligent networks. *Energy Research Abstracts*, 1981
