

1.2 Commissioning, diagnosis and operational functions

The system reaction of the CPX terminal can be adapted to the relevant application. For this purpose, the CPX terminal provides extensive functions for commissioning, diagnosis and operation.

Commissioning and operational functions

The reaction of the CPX terminal can be adapted to individual requirements by parameterising. The following reactions of the CPX terminal can be influenced, for example, by accessing the internal parameters:

- The reaction of the outputs and valves to fieldbus communication faults (fail-safe settings)
- The reaction to fault elimination
- The debounce times for digital input signals
- The signal extension for digital input signals
- The force settings (force signal status)
- The operating method of the diagnostic memory

The CPX terminal is supplied from the factory with preset parameters.

Caution

A different parametrisation will result in different characteristics. Check especially when replacing CPX terminals to see which settings are necessary and make sure that these are restored (e.g. in the start-up phase by the higher-order PLC/IPC).
