Complex Variables and Applications 9e will serve just as the earlier editions did as a textbook for an introductory course in the theory and application of functions of a complex variable. This new edition preserves the basic content and style of the earlier editions. The text is designed to develop the theory that is prominent in applications of the subject. You will find a special emphasis given to the application of residues and conformal mappings. To accommodate the different calculus backgrounds of students, footnotes are given with references to other texts that contain proofs and discussions of the more delicate results in advanced calculus. Improvements in the text include extended explanations of theorems, greater detail in arguments, and the separation of topics into their own sections.

Theory of Vibration Protection Igor A. Karnovsky, Evgeniy Lebed, 2016-05-09

This text is an advancement of the theory of vibration protection of mechanical systems with lumped and distributed parameters. The book offers various concepts and methods of solving vibration protection problems, discusses the advantages and disadvantages of different methods, and the fields of their effective applications. Fundamental approaches of vibration protection which are considered in this book are the passive parametric and optimal active vibration protection. The passive vibration protection is based on vibration isolation, vibration damping, and dynamic absorbers. Parametric vibration protection theory is based on the Shchipanov-Luzin invariance principle. Optimal active vibration protection theory is based on the Pontryagin principle and the Krein moment method. The book also contains special topics such as suppression of vibrations at the source of their occurrence and the harmful influence of vibrations on humans.

Numerous examples which illustrate the theoretical ideas of each chapter are included. This book is intended for graduate students and engineers. It is assumed that a reader has working knowledge of theory of vibrations, differential equations, and complex analysis.

About the Authors: Igor A. Karnovsky, Ph.D., Dr. Sci., is a specialist in structural analysis, theory of vibration, and optimal control of vibration. He has 40 years of experience in research, teaching, and consulting in this field and is the author of more than 70 published scientific papers, including two books in Structural Analysis published with Springer in 2010, 2012, and three handbooks in Structural Dynamics published with McGraw Hill in 2001, 2004. He also holds a number of vibration control related patents.

Evgeniy Lebed, Ph.D., is a specialist in applied mathematics and engineering. He has 10 years of experience in research, teaching, and
