Complexity Perspectives On Language Communication And Society Understanding Complex Systems:

Complexity Perspectives on Language, Communication and Society Àngels Massip-Bonet, Albert

Bastardas-Boada, 2012-10-13 The language communication society triangle defies traditional scientific approaches. Rather, it is a phenomenon that calls for an integration of complex transdisciplinary perspectives if we are to make any progress in understanding how it works. The highly diverse agents in play are not merely cognitive and/or cultural but also emotional and behavioural in their specificity. Indeed, the effort may require building a theoretical and methodological body of knowledge that can effectively convey the characteristic properties of phenomena in human terms. New complexity approaches allow us to rethink our limited and mechanistic images of human societies and create more appropriate emotional, cognitive, dynamic and holistic models. We have to enter into dialogue with the complexity views coming out of other more material sciences but we also need to take steps in the linguistic and psycho-sociological fields towards creating perspectives and concepts better fitted to human characteristics. Our understanding of complexity is different but not opposed to the one that is more commonly found in texts written by people working in physics or computer science, for example. The goal of this book is to extend the knowledge of these other more human or socially oriented perspectives on complexity, taking account of the language and communication singularities of human agents in society. Applications in Language and Communication Sciences Àngels Massip-Bonet, Gemma Bel-Enguix, Albert

Bastardas-Boada, 2019-01-11 This book offers insights on the study of natural language as a complex adaptive system. It discusses a new way to tackle the problem of language modeling and provides clues on how the close relation between natural language and some biological structures can be very fruitful for science. The book examines the theoretical framework and then applies its main principles to various areas of linguistics. It discusses applications in language contact, language change, diachronic linguistics and the potential enhancement of classical approaches to historical linguistics by means of new methodologies used in physics, biology and agent systems theory. It shows how studying language evolution and change using computational simulations enables to integrate social structures in the evolution of language and how this can give rise to a new way to approach sociolinguistics. Finally, it explores applications for discourse analysis, semantics and cognition. **Languages in Space and Time: Models and Methods from Complex Systems Theory** Marco Patriarca, Els

Heinsalu, Jean Leó Leonard, 2020-10-29 Demonstrates how complexity theory and statistical mechanics help define the language groups and model the language dynamics. *Emerging Sectarianism in the Dead Sea Scrolls*, 2022-07-18 These

essays reflect the lively debate about the sectarian movement of the Scrolls. They debate the degree to which the movement

was separated from the rest of Judaism and whether there was one or several watershed moments in the separation. Notable contributions include a cluster of essays on the Teacher of Righteousness and a thorough survey of the archaeology of Qumran. The texts are problematic in historical research because they rely on biblical stereotypes. Nonetheless, possible interpretations can be compared and degrees of probability debated. The debate is significant not only for the sect but for the nature of ancient Judaism.

Language is a complex adaptive system: Explorations and evidence Kristine Lund, Pierluigi Basso Fossali, Audrey Mazur, Magali Ollagnier-Beldame, 2022-10-22. The ASLAN labex Advanced studies on language complexity brings together a unique set of expertise and varied points of view on language. In this volume we employ three main sections showcasing diverse empirical work to illustrate how language within human interaction is a complex and adaptive system. The first section epistemological views on complexity pleads for epistemological plurality, an end to dichotomies and proposes different ways to connect and translate between frameworks. The second section complexity pragmatics and discourse focuses on discourse practices at different levels of description. Other semiotic systems in addition to language are mobilized but also interlocutors' perception, memory and understanding of culture. The third section complexity interaction and multimodality employs different disciplinary frameworks to weave between micro, meso and macro levels of analyses. Our specific contributions include adding elements to and extending the field of application of the models proposed by others through new examples of emergence, interplay of heterogeneous elements, intrinsic diversity, feedback, novelty, self-organization, adaptation, multi-dimensionality, indeterminism and collective control with distributed emergence. Finally, we argue for a change in vantage point regarding the search for linguistic universals.

Complexity in Second Language Study Emotions Richard J. Sampson, 2022-06-14. This book offers a socially situated view of the emergence of emotionality for additional language L2 learners in classroom interaction in Japan. Grounded in a complexity perspective, the author argues that emotions need to be studied as they are dynamically experienced and understood in all of their multidimensional colors by individuals in interaction. Via practitioner research, Sampson applies a small lens focus interweaving experiential and discursive data, offering possibilities for exploring, interpreting and representing the lived experience of L2 study emotions in a more holistic yet detailed social yet individual fashion. Amidst the currently expanding interest in L2 study emotions, the book presents a strong case for the benefits of locating interpretations of the emergence of L2 study emotions back into situated dynamic social context. Sampson's work will be of interest to students and researchers in second language acquisition and L2 learning psychology.

Developing New Identities in Social Conflicts Esperanza Morales-López, Alan Floyd, 2017-07-26. Conflicts are inherent to human society but most of them do not concern us directly as participants or eyewitnesses. How we see social conflicts depends on how they are presented to us. This volume gathers together writings by contemporary specialists in different fields from different backgrounds, cultures and locations but united by a common thread: the conviction that history and current affairs are constructed and presented not according to the facts.

Laura Mariottini, Monica Palmerini, 2022-06-21 Este volumen es el resultado de un proyecto científico amplio que tiene sus raíces en una trayectoria formativa y académica compartida por las editoras que remonta a los años de los estudios doctorales romanos en lingüística sincrónica diacrónica y aplicada que se han enfocado en ambos casos en la lengua española A partir de ese entonces ambas hemos venido conformando un punto de vista peculiar sobre el español en el que la tradición de estudios lingüísticos de base italiana se ha enlazado con los estudios hispánicos de alcance internacional Recientemente este antiguo proyecto ha encontrado las condiciones para su realización gracias también al establecerse de una red de colaboración entre estudiosos con intereses de investigación comunes y animados por una misma necesidad de reflexionar en torno al ámbito disciplinar denominado lingüística hispánica Desde nuestra perspectiva esta disciplina se ubica en el marco de la investigación sobre el lenguaje y las lenguas y es un dominio científico que pretende estudiar el español mediante modelos teóricos y metodológicos propios de la lingüística
