Composite Fouling On Heat Exchanger Surface:

Composite Fouling on Heat Exchanger Surfaces Yu Hong, 2007 Deposition of amorphous silica SiO₂ and calcium oxalate CaOx on the calandria tubes of juice evaporators cause serious processing problems in Australian cane sugar mills. The removal of these deposits by mechanical and chemical means is a time consuming and costly experience. The cost of downtime and chemical cleaning can be several million dollars per year for the Australian sugar industry. The interactions between CaOx and SiO₂ have not been investigated previously because conventional studies only address fouling by individual components. The present work evaluates their interactions using two experimental approaches: batch tests for assessing kinetic and thermodynamic behaviour and fouling loop experiments for examining composite fouling behaviour under different operating conditions. These two approaches were employed both in the absence and in the presence of sugar to elucidate the effect of sugar on composite fouling mechanisms and to determine the controlling species responsible for composite fouling. The combined information obtained from both the batch and fouling loop tests in this study offer a unique insight into the mechanisms of composite fouling of CaOx and SiO₂. *Heat Exchangers* Jovan Mitrovic, 2012-03-09

Selecting and bringing together matter provided by specialists, this project offers comprehensive information on particular cases of heat exchangers. The selection was guided by actual and future demands of applied research and industry, mainly focusing on the efficient use and conversion of energy in a changing environment. Besides the questions of thermodynamic basics, the book addresses several important issues such as conceptions, design, operations, fouling, and cleaning of heat exchangers. It includes also storage of thermal energy and geothermal energy use directly or by application of heat pumps. The contributions are thematically grouped in sections and the content of each section is introduced by summarising the main objectives of the encompassed chapters. The book is not necessarily intended to be an elementary source of the knowledge in the area it covers but rather a mentor while pursuing detailed solutions of specific technical problems which face engineers and technicians engaged in research and development in the fields of heat transfer and heat exchangers. **Polymer**

Nanocomposite Coatings Vikas Mittal, 2016-04-19 This work explores the use of composite nanotechnology for thin coatings on various substrates. It compiles recent advances in nanocomposite coatings for experienced researchers and provides background information for those new to the field. The book not only explains the synthesis of bulk nanocomposite materials but also describes their application in *Advanced Applications in Heat Exchanger Technologies* Sunil Kumar, Kavita Rathore, Debjyoti Banerjee, 2025-08-13 *Advanced Applications in Heat Exchanger Technologies* presents the most recent developments in enhancing heat exchanger performance, reliability, and resilience, including the implementation of Artificial Intelligence, Machine Learning, and Additive Manufacturing.
