Guide for Advanced Nursing Care of the Adult with Congenital Heart Disease Serena Francesca Flocco, Hajar Habibi, Federica Dellafiore, Christina Sillman, 2022-12-01 The aim of this book is to provide one central resource for nurses within the adult spectrum of life long congenital heart disease care who are seeking expert guidance for their practice regardless of clinical setting Over the past 50 years advances in surgical techniques and medical therapies have drastically improved the number of congenital heart disease patients surviving into adulthood with the result being that there are now

more adults than children living with congenital heart disease. In the past three decades, recognition of this new cardiology subspecialty has given way to formalized programs, standards of care, and multidisciplinary expertise. Indeed, nursing care of adult patients with congenital heart disease (ACHD) is a relatively new medical subspecialty with limited knowledge and guidance available and also an important component of the multidisciplinary care team. Nursing care of the ACHD encompasses a holistic approach to the physical, psychological, social, and spiritual wellbeing of these unique individuals across their lifespan. Understanding the intricacies for the various heterogeneous defect types, the transition from pediatric to adult care, the unique educational and self-care needs, life events such as pregnancy, reproduction, advanced heart failure, and end-of-life care helps prepare the nurse caring for the ACHD patient. Nurses as a first point of care for the ACHD patients play a pivotal role in the education and empowerment of the ACHD patient population and provide an invaluable role in the multidisciplinary team, and with this guide, nurses can feel confident in the quality of the care they provide. This book aims to introduce nursing-focused care to wider audiences: nurses, medical technicians, and physicians who are involved in the management and treatment of ACHD patients. Improving care and the quality of life for adult congenital heart disease patients with a multidisciplinary team-based approach, including nursing care, should be a central goal for all ACHD programs.

Consults in Obstetric Anesthesiology Suzanne K. W. Mankowitz, 2018-11-15. This text addresses the need for a book specifically aimed at obstetric anesthesia and covers topics such as pulmonary, cardiac, renal, hepatic, hematologic, neurologic, endocrine, and other diseases. The real anesthetic challenge arises when patients present to Labor and Delivery with unusual or complicated medical problems, and in recent years, a few of the larger institutions have developed an Obstetric Anesthesiology Consultation Service to prepare for the management of these patients. While most pregnant women who present to Labor and Delivery require anesthetic intervention, they typically meet the anesthesiologist for the first time in labor. Since the majority of laboring women are healthy without significant comorbidities, this does not

present much of a challenge to the anesthesiologist and the anesthetic management tends to be straight forward with favorable outcomes However using this new model the anesthesiologist has the opportunity to discuss the various treatment modalities and potentially suggest diagnostic testing to be performed prior to delivery similar to the pre operative testing that is done in other surgical environments **Post Mortem Examination and Autopsy** Kamil Hakan Dogan, 2018-02-14 Forensic medicine explores the legal aspects of medicine and medicolegal investigation of death is the most significant and crucial function of it The nature of post mortem examinations are changing and the understanding of causes of death are evolving with the increase of knowledge availability and use of various analyses including genetic testing Postmortem examination practice is turning into a more multidisciplinary approach for investigations which are becoming more evidence based Although there are numerous publications about forensic medicine and post mortem examination this book aims to provide some basic information on post mortem examination and current developments in some important and special areas It is considered that this book will be useful for forensic pathologists clinicians attorneys law enforcement officers and medical students
