Computational Intelligence for Agent-based Systems Raymond S.T. Lee, 2007-07-24 The scope of this volume is to give to the reader a wide scenario of recent works characterized by a synergistic combination of Soft Computing area with recent trends of Distributed Artificial Intelligence and Ambient Intelligence We edited this book for two basic motivations the emergence of computational intelligence as a mature and integrated science and the power of the agent paradigm in realizing complex and distributed environments Computational Intelligence has nowadays a mature formal theory and robust implementation experiences Intelligent agents have shown their inner ability in acquiring data and knowledge from and performing appropriate decisions through a functional relation that maps percepts to actions Computational Intelligence inside Agents are extremely helpful to support the designer of agent based systems in treating with unknown or ill defined environments

ments so to better handle knowledge representation and reasoning under these assumptions The formulation of cooperative strategies the linguistic aspects of the communication the local decision versus the global knowledge the actions and plans as distributed viewpoints could be characterized by an incomplete knowledge and by a fragmentation of logical interactions faced often by a non monotonic reasoning While building smart environments many challenges arise The system needs to interact with its users in order to obtain feedback in a non intrusive way Explicit implicit feedback is needed to take decisions in near real time
