Innovative Bridge Structures Based on Ultra-High Performance Concrete (UHPC) Xudong Shao, 2024-01-18 Innovative Bridge Structures Based on Ultra High Performance Concrete UHPC Theory Experiments and Applications introduces more than a dozen innovative bridge structures and engineering applications developed by the author s team based on UHPC As the new bridge structure developed by UHPC can make outstanding contributions to the realization of the carbon peaking and carbon neutrality goals and sustainable development and since recent studies have shown that the application of UHPC is expected to greatly reduce the amount of materials and carbon emissions and prolong the life of the structure this book is an ideal update on the topic For example after calculation when UHPC is applied to the arch bridge with compression as the main stress characteristic compared with the steel arch bridge the dead weight of the UHPC arch bridge is basically the same and the cost and carbon emission are only 34% and 20% of the latter Ultra high performance concrete UHPC as a new generation of civil structural materials has the characteristics of high strength high toughness and high durability Through the collaborative innovation of new materials and new structures

the application of UHPC in bridge engineering is expected to achieve the goal of economical environmentally friendly durable and high performance of the main structure Teachers readers about the new structures and technologies in bridge engineering developed by the author s team based on UHPC Provides relevant experimental studies and the mechanical properties of different UHPC structures Helps users understand the design method and calculation theory of UHPC bridge structures Covers the characteristics and advantages of new UHPC structures and technologies applied to engineering
