Treetops at Risk Margaret Lowman, Soubadra Devy, T. Ganesh, 2013-06-22 Forest canopies not only support high terrestrial biodiversity but also represent a critical interface between the atmosphere and the earth They provide goods and services to support diverse human communities and offer opportunities to explore sustainable use of these resources for many generations of local livelihoods Forest canopies are important carbon sequestration units and in this sense serve as climate control for the planet Canopies are important energy production centers for the planet and serve as the basis for many food chains The canopy can also act as a hook for education outreach and conservation inspiring ecotourism through recreation and other sustainable uses such as treetop walks zip lines and birding Despite these critical services provided by forest canopies almost no dedicated research in the treetops was initiated until as recently as the late 1970s when single rope techniques were developed by mountaineering professionals and adapted for use in the canopy Subsequently an array of canopy access tools was designed in the 1980s and early 1990s that have opened up this eighth continent for global exploration and discovery This volume uses the major findings of the 5th international canopy conference as a platform for organization but it does not mimic the sessions and presentations of the conference itself Instead it builds on the important themes that emerged from the conference and solicits articles that represent future priorities and advancements for canopy science in the next decade Despite the global efforts of hundreds of forest scientists over the past 3 decades forests are degrading at an accelerated rate and biodiversity is increasingly threatened by human activities Given these trends despite the very best efforts of the world's best scientists other approaches must be taken This volume summarizes the issue of treetops at risk and assembles a global authorship to examine past accomplishments and future initiatives critical in forest conservation

Phytochemistry of Australia's Tropical Rainforest Cheryll J. Williams, 2021-12 Rare unique and irreplaceable precious native rainforests occupy a precariously small part of Australia while retaining a remarkable level of both biological and chemical diversity unrivalled by any other ecosystem Australia's ancient history and traditions are intimately intertwined with the rainforest plants that humans have utilised as both food and medicine Phytochemistry of Australia's Tropical Rainforest is a record of this history and details how our understanding of these plants has led to the discovery of anaesthetics analgesics steroids antimalarials and more It provides an insight into the habitat ecology and family associations of hundreds of species and

explores their future therapeutic potential alongside phytochemical studies of the ancient plant lineages Toxicological evaluations of important poisonous plants are also included Rainforests provide shelter for unique flora and fauna that are counted among the rarest species on Earth many of which are illustrated in this book This comprehensive work is an essential reference for phytochemists ethnobotanists and those with an interest in rainforests and their medicinal and botanical potential

Australian Deserts Steve Morton, 2022-02-01 Australian Deserts Ecology and Landscapes is about the vast sweep of the Outback a land of expanses making up three quarters of the continent the heart of Australia Steve Morton brings his extensive first hand knowledge and experience of arid Australia to this book explaining how Australian deserts work ecologically This book outlines why unpredictable rainfall and paucity of soil nutrients underpin the nature of desert ecosystems while also describing how plants and animals came to be desert dwellers through evolutionary time It shows how plants use uncertain rainfall to provide for persistence of their populations alongside outlines of the dominant animals of the deserts and explanations of the features that help them succeed in the face of aridity and uncertainty Richly illustrated with the photographs of Mike Gillam this fascinating and accessible book will enhance your understanding of the nature of arid Australia

Applied Population and Community Ecology Jim Hone, 2012-06-20 Part of the Zoological Society of London's Conservation Science and Practice Series Applied Population and Community Ecology evaluates theory in population and community ecology using a case study of feral pigs birds and plants in the high country of south eastern Australia In sequence the book reviews the relevant theory and uses long term research over a quarter of a century on the population ecology of feral pigs and then community ecology of birds and plants to evaluate the theory The book brings together into one volume research results of many observational experimental and modelling studies and directly compares them with those from related studies around the world The implications of the results for future wildlife management are also discussed Intended readers are ecologists graduate students in ecology and wildlife management and conservation and pest managers

Booderee National Park David Lindenmayer, Christopher MacGregor, Nick Dexter, Martin Fortescue, Esther Beaton, 2014-03-03 Booderee National Park at Jervis Bay 200km south of Sydney attracts over 450 000 visitors each year The park has many special features including dramatic wave cut platforms and sea caves some of the whitest beach sands in Australia and very high densities of native predators such as the Powerful Owl and the Diamond Python This book outlines the biology and ecology of Booderee National Park Booderee packs an extraordinary level of biodiversity into a small area roughly 6500 hectares with more than 260 species of terrestrial vertebrates and over 625 species of plants It is home to species of significant conservation concern such as the globally endangered Eastern Bristlebird for which the park is one of its last and most important strongholds The diversity of vegetation is also astounding in some parts of the park it is possible to walk from ankle high sedgeland through woodlands and forest and into subtropical rainforest in less than 150 metres Chapters are arranged around key ecological processes predators and predation herbivores and herbivory invasive plants

and fire emphasising the interactions between species between vegetation and animals and between disturbances and animal and plant responses The book highlights how Booderee National Park is a functional natural ecosystem and in turn how management practices aim to improve environmental conditions and promote biodiversity conservation Richly illustrated with colour images from award winning photographer Esther Beaton this book will delight visitors to Booderee National Park as well as anyone with an interest in natural history
