Complex Variables Francis J. Flanigan, 2010-10-18 A caution to mathematics professors Complex Variables does not follow conventional outlines of course material One reviewer noting its originality wrote A standard text is often preferred to a superior text like this because the professor knows the order of topics and the problems and doesn't really have to pay attention to the text He can go to class without preparation Not so here Dr Flanigan treats this most important field of contemporary mathematics in a most unusual way While all the material for an advanced undergraduate or first year graduate course is covered discussion of complex algebra is delayed for 100 pages until harmonic functions have been analyzed from a real variable viewpoint Students who have forgotten or never dealt with this material will find it useful for the subsequent functions In addition analytic functions are defined in a way which simplifies the subsequent theory Contents include Calculus in the Plane Harmonic Functions in the Plane Complex Numbers and Complex Functions Integrals of Analytic Functions Analytic Functions and Power Series Singular Points and Laurent Series The Residue Theorem and the Argument Principle and Analytic Functions as Conformal Mappings Those familiar with mathematics texts will note the fine illustrations throughout and large number of problems offered at the chapter ends An answer section is provided Students weary of plodding mathematical prose will find Professor Flanigan's style as refreshing and stimulating as his approach

Science and Hypothesis Henri Poincaré, 2012-08-21 Nontechnical essays on hypothesis in physical theory concept of number magnitude force intuition vs logic more Chapters include On the Nature of Mathematical Reasoning Mathematical Magnitude and Experiment and The Calculus of Probabilities

Optimization Theory for Large Systems Leon S. Lasdon, 2013-01-17 Important text examines most significant algorithms for optimizing large systems and clarifying relations between optimization procedures Much data appear as charts and graphs and will be highly valuable to readers in selecting a method and estimating computer time and cost in problem solving Initial chapter on linear and nonlinear programming presents all necessary background for subjects covered in rest of book Second chapter illustrates how large scale mathematical programs arise from real world problems Appendixes List of Symbols

Catalysis in Chemistry and Enzymology William P. Jencks, 1987-01-01 Exceptionally clear coverage of mechanisms for catalysis forces in aqueous solution carbonyl and acyl group reactions practical kinetics more

Fourier Series and Orthogonal Functions Harry F. Davis, 2012-09-05 This incisive text deftly combines both theory and practical example to introduce and explore Fourier series and orthogonal functions and applications of the Fourier method to the solution of boundary value problems Directed to advanced undergraduate and graduate students in mathematics as well as in physics and engineering the book requires no prior knowledge of partial differential equations or advanced vector analysis Students familiar with partial derivatives

multiple integrals vectors and elementary differential equations will find the text both accessible and challenging The first three chapters of the book address linear spaces orthogonal functions and the Fourier series Chapter 4 introduces Legendre polynomials and Bessel functions and Chapter 5 takes up heat and temperature The concluding Chapter 6 explores waves and vibrations and harmonic analysis Several topics not usually found in undergraduate texts are included among them summability theory generalized functions and spherical harmonics Throughout the text are 570 exercises devised to encourage students to review what has been read and to apply the theory to specific problems Those preparing for further study in functional analysis abstract harmonic analysis and quantum mechanics will find this book especially valuable for the rigorous preparation it provides Professional engineers physicists and mathematicians seeking to extend their mathematical horizons will find it an invaluable reference as well

Introduction to the Theory of Games J. C. C. McKinsey, 2012-11-14 This comprehensive overview of the mathematical theory of games illustrates applications to situations involving conflicts of interest including economic social political and military contexts Advanced calculus a prerequisite Includes 51 figures and 8 tables 1952 edition
