Conclusion *The Great Transition* Mauro Bonaiuti, 2014 Recent events including the financial crisis and the gradual lessening of the planet's natural resources have raised the fundamental question as to whether the capitalist market system can survive its own contradictions or whether we are witnessing the outset of a profound change in civilization By deploying the tools of the science of complexity alongside those of historical research Mauro Bonaiuti tackles this basic question posed against a backdrop of declining marginal returns where growth in the complexity of industrial military and bureaucratic institutional apparatuses is thought to have led to progressive increases in economic social and environmental costs In this framework the economic crisis we are traversing grave as it is could be interpreted not as a simple cyclical crisis from which it is possible to escape by the traditional policies of supporting growth but as the outcome of a passage of civilization inscribed in the long term evolutionary dynamics of capitalism After the crisis that started in 2008 with millions of people unemployed with the failure of the economy to pick up and with the ever growing sense of precariousness and insecurity we are beginning to suspect that we are facing something more than a cyclical crisis **Towards Rethinking Politics, Policy**

**and Polity in the Anthropocene** Hans Günter Brauch, 2025-02-24 Humankind faces two anthropogenic threats to its survival that are closely linked The first is the end of the Holocene and the start of the Anthropocene which was marked by the test of a nuclear bomb on 16 July 1945 In the prevailing peace and security narrative nuclear weapons and the other country bloc or alliance pose a perceived threat to humankind's survival In the Anthropocene narrative we are the threat through our way of life and the burning of fossil fuels The start of the Anthropocene coincides with a change in the international order with the setting up of the UN and the Bretton Woods Institutions Three stages of this order are distinguished the Cold War bipolarity the post Cold War era unipolarity and the end of the rule based global liberal order multipolarity on 24 February 2022 In this book ten multidisciplinary perspectives discuss complexity Anthropocene geopolitics peace and security discourses and the debate on the Anthropocene planetary boundaries complex crises and integrative geography in the Anthropocene governance and politics and the Patriacene and gender Both existential threats for humankind are illustrated by cover photos of the first nuclear weapons test on 16 July 1945 and by Category 5 Hurricane Otis an extreme weather event impacting on Acapulco in Mexico on 25 October 2023 The Anthropocene as a new epoch of Earth history coincides in 1945 with a change in the international order In the security and peace narrative the other and nuclear weapons pose an existential threat in the Anthropocene narrative This dual existential change requires a rethinking

of politics policy and polity In the social sciences the Anthropocene is being discussed from multidisciplinary perspectives geography political science and peace security and gender studies This is an open access publication *The Sugarcane Complex in Brazil* Felix Kaup,2015-03-28 This book offers an in depth analysis of the Brazilian sugarcane complex with a special focus on technological advances that promote sustainable development It first examines the question why sugarcane based ethanol from Brazil is considered a superior alternative to fossil fuel compared to other biofuels produced on an industrial scale and subsequently analyzes the most dynamic areas within the sugarcane sector with regard to relevant actors technologies and markets in order to determine if the sector can be considered an innovation system The empirical research presented here is based on multiple research methods and derives its data from interviews with Brazilian experts of the sugarcane sector and by a thorough literature review The book will be of special interest to researchers and practitioners interested in understanding the key mechanisms in successful innovation systems that promote a transition towards sustainable development and mobility The Complexities Of Sustainability David Crowther,Shahla Seifi,2022-12-02

Sustainability is a topic of great interest to governments businesses and individual members of society There is a general consensus that sustainability is important and therefore needs to be addressed There is much less consensus however as to what this actually means and how it can be addressed It appears to mean different things to different people and certainly everyone has their own priorities about what needs to be addressed Consensus is difficult to find because of the complexity of what is involved in sustainability This book addresses a number of these complexities by looking at different perspectives from experts from a wide range of different disciplines and from different parts of the world The aim of the book therefore is to stimulate discussion about what needs to be prioritised as this forms an essential precursor to taking the necessary actions in order to achieve the essential sustainability for the planet This book is indexed in Scopus **Physical Limits to**

**Economic Growth** Roberto Burlando,Angelo Tartaglia,2017-12-22 The debate on the physical limits and constraints to the economic growth of globalized society is now widespread This book explores the physical and economic aspects of the conflict between humans with their thoughtless focus on growth through material production and environmental constraints In the context of the looming shortage of material resources and the latest science on climate change *Physical Limits to Economic Growth* offers new insights which provide a broad and comprehensive picture of the conflict between humans and environmental constraints The authors approach goes beyond the boundaries of specialized disciplines to explore climate change resource depletion technical innovation and the interactions between these within the socio economic institutional systems we live in This volume looks at opportunities for rethinking these systems if we moved away from fossil fuel dependence while considering the status of current mainstream economic thinking around this subject *Physical Limits to Economic Growth* provides a genuine interdisciplinary examination of the physical limits to economic growth It will be of interest to both students and academics in various disciplines in the areas of natural sciences climate change and economics

**One Health, 2nd Edition** Jakob Zinsstag, Esther Schelling, Lisa Crump, Maxine Whittaker, Marcel Tanner, Craig Stephen, 2020-09-30 One Health the concept of combined veterinary and human health has now expanded beyond emerging infectious diseases and zoonoses to incorporate a wider suite of health issues Retaining its interdisciplinary focus which combines theory with practice this new edition illustrates the contribution of One Health collaborations to real world issues such as sanitation economics food security and vaccination programmes It includes more non infectious disease issues and climate change discussion alongside revised case studies and expanded methodology chapters to draw out implications for practice Promoting an action based solutions oriented approach One Health The Theory and Practice of Integrated Health Approaches highlights the lessons learned for both human and animal health professionals and students **Economics,**

**Ecology, and Policy for the Bioeconomy** Sanja Tišma, Anamarija Farkaš, Anamarija Pisarović, Marina Funduk, Iva Tolić, 2022-09-15 This book demonstrates that a holistic approach to the bioeconomy is essential if it is to achieve its full potential in driving economic growth while simultaneously providing ecological social and technological benefits Definitions of the bioeconomy vary but in general it incorporates the ways in which societies manage and distribute their primary or secondary biological resources for further use in everyday life e g food materials and energy The classical sectors related to the bioeconomy have therefore been agriculture forestry and aquaculture now extended to include bioenergy biofuels biochemicals and other processing and service industries There are also related new concepts such as the blue economy the green economy and the circular economy This book integrates these definitions sectoral analyses and new concepts into a fully rounded study of the bioeconomy It is argued that the key aims in the coming years have to be the harmonization of public policies between different sectors regulation of legislative framework for the bioeconomy and clear communication of these issues In particular the book argues that a strengthening of the monitoring and evaluation of the impacts of the bioeconomy on society is an essential starting point For this to be effective appropriate indicators need to be established and defined for the monitoring of the effects of these resilient policies related to bioeconomy and their impact on local and regional development and quality of life This book will be essential reading for anyone interested in the bioeconomy including students and scholars of ecological economics environmental economics sustainability innovation and regional development
