Composition Methods In Homotopy Groups Of Spheres:

Composition Methods in Homotopy Groups of Spheres Hiroshi Toda, 2016-03-02 Hiroshi Toda's classic treatment of composition methods in homotopy groups of spheres from the acclaimed Annals of Mathematics Studies series Princeton University Press is proud to have published the Annals of Mathematics Studies since 1940 One of the oldest and most respected series in science publishing it has included many of the most important and influential mathematical works of the twentieth century The series continues this tradition as Princeton University Press publishes the major works of the twenty first century To mark the continued success of the series all books are available in paperback and as ebooks

Composition Methods in Homotopy Groups of Spheres Hiroshi Toda, 1962 **Composition Methods in Homotopy Groups of Spheres, By Hiroshi Toda** Hiroshi Toda, 1962 Cohomological Methods in Homotopy Theory Jaume

Aguade, Carles Broto, Carles Casacuberta, 2012-12-06 This book contains a collection of articles summarizing the state of knowledge in a large portion of modern homotopy theory A call for articles was made on the occasion of an emphasis semester organized by the Centre de Recerca Matemàtica in Bellaterra Barcelona in 1998 The main topics treated in the book include abstract features of stable and unstable homotopy homotopical localizations p -compact groups H -spaces classifying spaces for proper actions cohomology of discrete groups K -theory and other generalized cohomology theories configuration spaces and Lusternik Schnirelmann category The book is addressed to all mathematicians interested in homotopy theory and in geometric aspects of group theory New research directions in topology are highlighted Moreover this informative and educational book serves as a welcome reference for many new results and recent methods **Complex Cobordism and**

Stable Homotopy Groups of Spheres Douglas C. Ravenel, 2023-02-09 Since the publication of its first edition this book has served as one of the few available on the classical Adams spectral sequence and is the best account on the Adams-Novikov spectral sequence This new edition has been updated in many places especially the final chapter which has been completely rewritten with an eye toward future research in the field It remains the definitive reference on the stable homotopy groups of spheres The first three chapters introduce the homotopy groups of spheres and take the reader from the classical results in the field through the computational aspects of the classical Adams spectral sequence and its modifications which are the main tools topologists have to investigate the homotopy groups of spheres Nowadays the most efficient tools are the Brown-Peterson theory the Adams-Novikov spectral sequence and the chromatic spectral sequence a device for analyzing the global structure of the stable homotopy groups of spheres and relating them to the cohomology of the Morava stabilizer groups These topics are described in detail in Chapters 4 to 6 The revamped Chapter 7 is the computational payoff of the book yielding a lot of information about the stable homotopy group of spheres Appendices follow giving self-contained accounts of the theory of formal group laws and the homological algebra associated with Hopf algebras and Hopf algebroids The book is intended for anyone wishing to study computational stable homotopy theory It is accessible to graduate students with a

knowledge of algebraic topology and recommended to anyone wishing to venture into the frontiers of the subject

Geometric Applications of Homotopy Theory I M. G. Barratt, M. E. Mahowald, 2006-11-15 *The Goodwillie Tower and the EHP Sequence* Mark Behrens, 2012 The author studies the interaction between the EHP sequence and the Goodwillie tower of the identity evaluated at spheres at the prime 2 Both give rise to spectral sequences the EHP spectral sequence and the Goodwillie spectral sequence respectively which compute the unstable homotopy groups of spheres He relates the Goodwillie filtration to the P map and the Goodwillie differentials to the H map Furthermore he studies an iterated Atiyah Hirzebruch spectral sequence approach to the homotopy of the layers of the Goodwillie tower of the identity on spheres He shows that differentials in these spectral sequences give rise to differentials in the EHP spectral sequence He uses his theory to recompute the 2 primary unstable stems through the Toda range up to the 19 stem He also studies the homological behavior of the interaction between the EHP sequence and the Goodwillie tower of the identity This homological analysis involves the introduction of Dyer Lashof like operations associated to M Ching's operad structure on the derivatives of the identity These operations act on the mod 2 stable homology of the Goodwillie layers of any functor from spaces to spaces

Geometric topology William Hilal Kazez, 1996-10-22 This is Part 1 of a two part volume reflecting the proceedings of the 1993 Georgia International Topology Conference held at the University of Georgia during the month of August The texts include research and expository articles and problem sets The conference covered a wide variety of topics in geometric topology Features Kirby's problem list which contains a thorough description of the progress made on each of the problems and includes a very complete bibliography makes the work useful for specialists and non specialists who want to learn about the progress made in many areas of topology This list may serve as a reference work for decades to come Gabai's problem list which focuses on foliations and laminations of 3 manifolds collects for the first time in one paper definitions results and problems that may serve as a defining source in the subject area

Algebraic Topology: Oaxtepec 1991 Martin C. Tangora, 1993 This book consists of twenty nine articles contributed by participants of the International Conference in Algebraic Topology held in July 1991 in Mexico In addition to papers on current research there are several surveys and expositions on the work of Mark Mahowald whose sixtieth birthday was celebrated during the conference The conference was truly international with over 130 mathematicians from fifteen countries It ended with a spectacular total eclipse of the sun a photograph of which appears as the frontispiece The papers range over much of algebraic topology and cross over into related areas such as K theory representation theory and Lie groups Also included is a chart of the Adams spectral sequence and a bibliography of Mahowald's publications

The Selected Works of J. Frank Adams J. Frank Adams, 1992-10-07 J. Frank Adams was one of the world's leading topologists He solved a number of celebrated problems in algebraic topology a subject in which he initiated many of the most active areas of research He wrote a large number of papers during the period 1955-1988 and they are characterised by elegant writing and depth of thought Few of them have been superseded by later work

This selection in two volumes brings together all his major research contributions. They are organised by subject matter rather than in strict chronological order. The first contains papers on the cobar construction, the Adams spectral sequence, higher order cohomology operations and the Hopf invariant one problem, applications of K theory, generalised homology and cohomology theories. The second volume is mainly concerned with Adams' contributions to characteristic classes and calculations in K theory, modules over the Steenrod algebra and their Ext groups, finite H spaces and compact Lie groups, maps between classifying spaces of compact groups. Every serious student or practitioner of algebraic topology will want to own a copy of these two volumes both as a historical record and as a source of continued reference.
