Computational Morphology A Computational Geometric Approach To The Analysis Of Form:

Computational Morphology G.T. Toussaint, 2014-06-28 Computational Geometry is a new discipline of computer science that deals with the design and analysis of algorithms for solving geometric problems There are many areas of study in different disciplines which while being of a geometric nature have as their main component the extraction of a description of the shape or form of the input data This notion is more imprecise and subjective than pure geometry Such fields include cluster analysis in statistics computer vision and pattern recognition and the measurement of form and form change in such areas as stereology and developmental biology This volume is concerned with a new approach to the study of shape and form in these areas Computational morphology is thus concerned with the treatment of morphology from the computational geometry point of view This point of view is more formal elegant procedure oriented and clear than many previous approaches to the problem and often yields algorithms that are easier to program and have lower complexity

Discrete and Computational Geometry Jin Akiyama, Mikio Kano, Masatsugu Urabe, 2003-06-29 This book constitutes the thoroughly refereed post proceedings of the Japanese Conference on Discrete Computational Geometry JCDCG 2001 held in Tokyo Japan in November 2001 The 35 revised papers presented were carefully reviewed and selected Among the topics covered are polygons and polyhedrons divisible dissections convex polygon packings symmetric subsets convex decompositions graph drawing graph computations point sets approximation Delaunay diagrams triangulations chromatic numbers complexity layer routing efficient algorithms and illumination problems

Visual Form C. Arcelli, L.P. Cordella, G.S. di Baja, 2013-11-11 This book contains the papers presented at the International Workshop on Visual Form held in Capri Italy on May 27 30 1991 The workshop sponsored by the International Association for Pattern Recognition APR has been jointly organized by the Dipartimento di Informatica e Sistemistica of the University of Naples and the Istituto di Cibernetica of the National Research Council of Italy and has focussed on Shape Shape is a distinctive feature of most patterns so that recognition can often be attained through shape discrimination The organizers of the workshop shared the general feeling manifested by researchers

that it was time for holding a meeting exclusively devoted to a feature so crucial for both human and machine perception. During this meeting problems and prospects in the field of 2D and 3D shape analysis could be discussed extensively so as to provide an effective updated picture of the current research activity in which shape plays a central role. Indeed many highly qualified researchers in the field positively reacted to the Call for Papers.

Soil Micromorphology: Studies in Management and Genesis A.J. Ringrose-Voase, G.S. Humphreys, 1994-08-01 The papers in this volume cover micromorphological studies of a wide variety of topics at various scales from ultramicro to mesoscopic. Topics included are soil management, soil structure, surface crusts, hardpans and cemented layers, soil biota, soil genesis, hydromorphic soils, paleosols, archeology and general pedology. The range of papers reflects the growing use of soil micromorphology in understanding soil problems in land use and the increasing use of quantitative techniques together with more traditional applications in pedology. The book is well illustrated with micrographs and contains both author and keyword indices.

An Optimization-Based Approach for Continuous Map Generalization Dongliang Peng, 2019-05-29 Maps are the main tool to represent geographical information. Users often zoom in and out to access maps at different scales. Continuous map generalization tries to make the changes between different scales smooth which is essential to provide users with comfortable zooming experience. In order to achieve continuous map generalization with high quality we optimize some important aspects of maps. In this book we have used optimization in the generalization of land cover areas, administrative boundaries, buildings and coastlines. According to our experiments, continuous map generalization indeed benefits from optimization.

Combinatorial Algorithms Henning Fernau, Binhai Zhu, 2025-08-19 This book constitutes the refereed proceedings of the 36th International Workshop on Combinatorial Algorithms IWOCA 2025 held in Bozeman MT USA during July 21-24, 2025. The 32 full papers and two abstracts of invited talks included in this book were carefully reviewed and selected from 71 submissions. The IWOCA conference series has provided an annual forum for researchers who design algorithms to address the myriad combinatorial problems underlying computer applications in science, engineering and business.

Restricted-Orientation Convexity Eugene Fink, Derick Wood, 2012-12-06 Restricted orientation convexity is the study of geometric objects whose intersections with lines from some fixed set are connected. This notion generalizes standard convexity and several types of nontraditional convexity. We explore the properties of this generalized convexity in multidimensional Euclidean space, describes restricted orientation analogs of lines, hyperplanes, flats and halfspaces and identify major properties of standard convex sets that also hold for restricted orientation convexity. We then introduce the notion of strong restricted orientation convexity which is an alternative generalization of convexity and show that its properties are also similar to those of standard convexity.

Multi-criteria Decision Making for Smart Grid Design and Operation Lazar Z. Velimirović, Aleksandar Janjić, Jelena D. Velimirović, 2023-01-09 The book is dedicated to the implementation of different multi-criteria decision making techniques for various problems concerning planning and

operation of the smart grid from the Society 5.0 perspective. It consists of a practical explanation of several multi-criteria approaches and examples of their application to real problems. In this book, the choice of the optimal smart grid strategy in planning and operation is made. Various areas of smart grid problems are analyzed from the smart grid project efficiency assessment to the electric vehicle charging schedule optimization. The comparison of alternatives is made using different techniques taking into account the presence of multiple criteria of both qualitative and quantitative nature, different performance indicators and the uncertain environment of the smart grid. The book outlines in clear terms how the electricity grid can be modernized in such a way that it monitors, protects and automatically optimizes the operation of its interconnected elements taking into account different stakeholders and criteria and society in general. The book covers various smart grid aspects from the distributed generator through the medium voltage network and distribution system to energy storage installations and to end use consumers and their thermostats, electric vehicles, appliances and other household devices. The book serves as a practical guide for researchers, energy and utility professionals, power system planners, regulators, policymakers and others in the field.

Uncertain Multi-Criteria Optimization Problems Dragan Pamucar, 2021-09-09. Most real world search and optimization problems naturally involve multiple criteria as objectives. Generally, symmetry, asymmetry and anti-symmetry are basic characteristics of binary relationships used when modeling optimization problems. Moreover, the notion of symmetry has appeared in many articles about uncertainty theories that are employed in multi-criteria problems. Different solutions may produce trade-offs, conflicting scenarios among different objectives. A better solution with respect to one objective may compromise other objectives. There are various factors that need to be considered to address the problems in multidisciplinary research, which is critical for the overall sustainability of human development and activity. In this regard, in recent decades, decision making theory has been the subject of intense research activities due to its wide applications in different areas. The decision making theory approach has become an important means to provide real time solutions to uncertainty problems. Theories such as probability theory, fuzzy set theory, type 2 fuzzy set theory, rough set and uncertainty theory available in the existing literature deal with such uncertainties. Nevertheless, the uncertain multi-criteria characteristics in such problems have not yet been explored in depth and there is much left to be achieved in this direction. Hence, different mathematical models of real life multi-criteria optimization problems can be developed in various uncertain frameworks with special emphasis on optimization problems.
