Nielsen, 2014-05-24 One of the greatest challenges facing the computational engineering community is to extend the success of computational mechanics to fields outside traditional engineering in particular to biology the biomedical sciences and medicine The Computational Biomechanics for Medicine series provides an opportunity for specialists in computational biomechanics to present their latest methodologies and advancements This 5th edition

comprises nine of the latest developments in both fundamental science and patient specific applications from researchers in Australia New Zealand USA UK France Ireland and China Some of the interesting topics discussed are cellular mechanics tumor growth and modeling medical image analysis and both patient specific fluid dynamics and solid mechanic simulations

Bioprinting: Principles And Applications Wai Yee Yeong, Chee Kai Chua, 2014-11-27 At labs around the world researchers have been experimenting with bioprinting first just to see whether it was possible to push cells through a printhead without killing them in most cases it is and then trying to make cartilage bone skin blood vessels small bits of liver and other tissues There are other ways to try to engineer tissue one involves creating a scaffold out of plastics or other materials and adding cells to it In theory at least a bioprinter has advantages in manipulating control of the placement of cells and other components to mimic natural structures But just as the claims made for 3 D printing technology sometimes exceed the reality the field of bioprinting has seen its share of hype The reality is that although bioprinting researchers have made great strides there are many formidable obstacles to overcome Nobody who has any credibility claims they can print organs or believes in their heart of hearts that that will happen in the next 20 years but for operations like hip replacement advance in Bio printing has made customization of certain body parts possible This book will start from the concept of Tissue Engineering covering various approaches in Scaffolds for tissue engineering Bioprinting techniques and Materials for bioprinting Cell processing 3D cell culture techniques Computational design and simulation multi disciplinary approaches in bioprinting and finally cover the applications of bioprinting
