Cibse Guide B 2015:

Metric Handbook Pamela Buxton,2021-11-25 The Metric Handbook is the major handbook of planning and design data for architects and architecture students with over 100 000 copies sold to successive generations of architects and designers It remains the ideal starting point for any project and belongs in every design office The seventh edition references the latest regulations and construction standards and includes new chapters on data centres and logistics facilities alongside basic design data for all the major building types For each building type the book gives the basic design requirements and all the principal dimensional data and succinct guidance on how to use the information and what regulations the designer needs to be aware of As well as buildings the Metric Handbook deals with broader aspects of design such as materials acoustics and lighting and general design data on human dimensions and space requirements The Metric Handbook is the unique reference for solving everyday planning problems

A Guide to Energy Management in Buildings Douglas Harris,2016-11-29 This new edition of A Guide to Energy Management in Buildings begins by asking why we need to control energy use in buildings and proceeds to discuss how the energy consumption of a building can be assessed or estimated through an energy audit It then details a range of interventions to reduce energy use and outlines methods of assessing the cost effectiveness of such measures Topics covered include where and how energy is used in buildings energy audits measuring and monitoring energy use techniques for reducing energy use in buildings legislative issues And new in this edition the cooling of buildings fuel costs and smart metering and education and professional recognition It provides a template for instigating the energy management process within an organization as well as guidance on management issues such as employee motivation and gives practical details on how to carry the process through This book should appeal to building and facilities managers and also to students of energy management modules in FE and HE courses

Attachment Ventilation Theory Angui Li,2023-05-02 This open access book systematically summarizes the current research progress of attachment ventilation covering vertical wall attachment column attachment and adaptive attachment ventilation Attachment ventilation is a high performance ventilation mode that was first proposed by the author Prof Angui Li 20 years ago Now it has been widely used in office spaces subway stations high speed railway stations international airport terminals and other large spaces This book introduces attachment ventilation in detail to eliminate the cooling heating load of the occupied zone and provide an expected environment for the air conditioned zone Attachment ventilation combines the advantages of traditional mixed ventilation and displacement ventilation This book consists of six chapters covering a series of airflow patterns mechanisms parameter correlations and attachment ventilation design methods It is helpful for HVAC engineers to design attachment ventilation effectively

Air Conditioning System Design Roger Legg,2017-06-15 Air Conditioning System Design summarizes essential theory and then explains how the latest air conditioning technology operates Load calculations energy efficiency and selection of technology are all explained in the context of air conditioning as a system helping the reader fully

consider the implications of design decisions Whether users need to figure out how to apply their mechanical engineering degree to an air conditioning design task or simply want to find out more about air conditioning technology for a research project this book provides a perfect guide Approaches air conditioning as a system not just a collection of machines Covers the essential theory on fluid flow and the latest in A C technology in a very readable and easy to use style Explains the significance of factors such as climate and thermal comfort as A C design considerations Addresses design using a range of air conditioning technologies such as evaporative cooling VRF systems psychromatic software and dessicant dehumidification

Sustainable Construction Processes Steve Goodhew, 2016-04-13 This book explores the concepts and practicalities that lead to sustainable construction It breaks new ground by providing the reader with the underlying principles of how to build sustainably and then assesses many of the tools required for the task From energy to materials and from procurement to operation all aspects play their part in turning a theoretically sustainable building project into a reality There are many guidelines for the designer on how to maximise the sustainability of buildings but this resource text supplements these by focusing on the construction and operational aspects of sustainable buildings as well as some of the more fundamental design related considerations Offers an excellent text for those learning to construct design and operate sustainable buildings Covers the drivers for sustainable construction definitions historical impacts climate change and global regional and individual responses enables the construction professional to achieve optimum solutions both in design process and the aftercare of buildings evaluates the effectiveness of different renewable technologies and provides guidance on the practicalities of their use Alerts the reader to future trends in this field

Designing Zero Carbon Buildings Ljubomir Jankovic, 2024-06-17 In this significantly revised third edition Designing Zero Carbon Buildings combines embodied and operational emissions into a structured approach for achieving zero emissions by a specific year with certainty Simulation and quantitative methods are introduced in parallel with analogue scale models to demonstrate how things work in buildings Where equations are provided this is also explained with common analogue objects pictures and narratives A Zero Equation introduced in this book is not only explained as an equation but also as an analogy with a jam jar and spoons making the book accessible for a range of audiences Tasks for simple experiments exercises discussion questions and summaries of design principles are provided in closing lines of chapters This book introduces new case studies in addition to an updated case study of the Birmingham Zero Carbon House applying embodied and operational emissions to assess their status using the Zero Equation The approach introduced brings about a sense of realism into what true zero emissions mean Written for students educators architects engineers modellers practising designers sustainability consultants and others it is a major positive step towards design thinking that makes achieving zero carbon emissions a reality

BUiD Doctoral Research Conference 2023 Khalid Al Marri, Farzana Asad Mir, Solomon Arulraj David, Mostafa Al-Emran, 2024-03-28 This open access book presents selected contributions on a wide range of scientific and technological areas originating from the BUiD Doctoral

Research Conference BDRC 2023 It discusses the following topics project management macroeconomic factors Fourth Industrial Revolution agility multiculturalism diversity inclusion leadership language discourse analysis curriculum critical thinking programming online learning and natural ventilation The contributions reflect the multifaceted nature of the research in three academic disciplines i e humanities formal science and applied science This publication shares with its readers genuine research studies and reflections from practitioners on the current practice and understanding in the three academic disciplines The significant findings of these studies have considerable educational industrial and economic implications This is an open access book **Building Services Design for Energy Efficient Buildings** Paul

Tymkow,Savvas Tassou,Maria Kolokotroni,Hussam Jouhara,2020-07-12 The role and influence of building services engineers are undergoing rapid change and are pivotal to achieving low carbon buildings However textbooks in the field have tended to remain fairly traditional with a detailed focus on the technicalities of heating ventilation and air conditioning HVAC systems often with little wider context This book addresses that need by embracing a contemporary understanding of the urgent challenge to address climate change together with practical approaches to energy efficiency and carbon mitigation for mechanical and electrical systems in a concise manner The essential conceptual design issues for planning the principal building services systems that influence energy efficiency are examined in detail These are HVAC and electrical systems In addition the following issues are addressed background issues on climate change whole life performance and design collaboration generic strategies for energy efficient low carbon design health and wellbeing and post occupancy evaluation building ventilation air conditioning and HVAC system selection thermal energy generation and distribution systems low energy approaches for thermal control electrical systems data collection controls and monitoring building thermal load assessment building electric power load assessment space planning and design integration with other disciplines In order to deliver buildings that help mitigate climate change impacts a new perspective is required for building services engineers from the initial conceptual design and throughout the design collaboration with other disciplines This book provides a contemporary introduction and guide to this new approach for students and practitioners alike **Principle, Design and**

Optimization of Air Balancing Methods for the Multi-zone Ventilation Systems in Low Carbon Green Buildings Xin Zhang,Can Cui,Wen-Jian Cai,Hui Cai,Gang Jing,2022-10-17 This book presents a systematic study on the air balancing technologies in heating ventilation and air conditioning HVAC systems Several modern air balancing methods including advanced control based air balancing data driven based air balancing and energy saving oriented air balancing are introduced in this book to balance the air duct system Furthermore this book provides clear instructions for both HVAC designers and engineers as well as researchers on how to design and balance duct systems for improved performance and energy efficiency Elevator Traffic Handbook Gina Barney,Lutfi Al-Sharif,2015-08-27 This second edition of this well respected book covers all aspects of the traffic design and control of vertical transportation systems in buildings making it an

essential reference for vertical transportation engineers other members of the design team and researchers The book introduces the basic principles of circulation outlines traffic design methods and examines and analyses traffic control using worked examples and case studies to illustrate key points The latest analysis techniques are set out and the book is up to date with current technology A unique and well established book this much needed new edition features extensive updates to technology and practice drawing on the latest international research

Reviewing **Cibse Guide B 2015**: Unlocking the Spellbinding Force of Linguistics
