

CompTIA CDIA+ Certification Exam Objectives Exam Number: CD0-001

Introduction

CompTIA's CDIA+ certification is an internationally recognized credential acknowledging competency and professionalism in the document imaging/records management industry. CompTIA's CDIA+ candidates possess critical knowledge of all major areas and technologies used to plan, design, and specify an enterprise content system.

The CompTIA CDIA+ exam will certify that the successful candidate has the knowledge and skills required to explain content management concepts, including business analysis processes, content lifecycle and workflow, and concepts related to integrating a content imaging system with business applications using project management fundamentals. Additionally, a successful candidate will be able to implement scanning technology infrastructure and participate in the design of capture solutions, while addressing security requirements.

The skills and knowledge measured by this examination are derived from an industry-wide and worldwide job task analysis, which was validated through a survey. The results of the survey are used in weighting the domains and ensuring that the weighting is representative of the relative importance of that content to the job requirements of a digital content imaging professional with at least 24 months of experience.

This examination blueprint for CompTIA's CDIA+ examination includes the weighting and test objectives. Example topics and concepts are included to clarify the test objectives and should not be construed as a comprehensive list of all the content of this examination.

The table below lists the domains measured by this examination and the extent to which they are represented in the examination.

1.0 Enterprise Content Management	20%
2.0 Capture	23%
3.0 Storage and Networking	13%
