**Complex Cobordism and Stable Homotopy Groups of Spheres** Douglas C. Ravenel, 2003 Since the publication of its first edition this book has served as one of the few available on the classical Adams spectral sequence and is the best account on the Adams Novikov spectral sequence This new edition has been updated in many places especially the final chapter which has been completely rewritten with an eye toward future research in the field It remains the definitive reference on the stable homotopy groups of spheres The first three chapters introduce the homotopy groups of spheres and take the reader from the classical results in the field through the computational aspects     Complex Cobordism and Stable Homotopy Groups of Spheres Douglas C. Ravenel, 2023-02-09 Since the publication of its first edition this book has served as one of the few available on the classical Adams spectral sequence and is the best account on the Adams Novikov spectral sequence This new edition has been updated in many places especially the final chapter which has been completely rewritten with an eye toward future research in the field It remains the definitive reference on the stable homotopy groups of spheres The first three chapters introduce the homotopy groups of spheres and take the reader from the classical results in the field through the computational aspects of the classical Adams spectral sequence and its modifications which are the main tools topologists have to investigate the homotopy groups of spheres Nowadays the most efficient tools are the Brown Peterson theory the Adams Novikov spectral sequence and the chromatic spectral sequence a device for analyzing the global structure of the stable homotopy groups of spheres and relating them to the cohomology of the Morava stabilizer groups These topics are described in detail in Chapters 4 to 6 The revamped Chapter 7 is the computational payoff of the book yielding a lot of information about the stable homotopy group of spheres Appendices follow giving self contained accounts of the theory of formal group laws and the homological algebra associated with Hopf algebras and Hopf algebroids The book is intended for anyone wishing to study computational stable homotopy theory It is accessible to graduate students with a knowledge of algebraic topology and recommended to anyone wishing to venture into the frontiers of the subject     **An Alpine Bouquet of Algebraic Topology** Jérôme Scherer, 2018-05-30 This volume contains the proceedings of the Alpine Algebraic and Applied Topology Conference held from August 15 21 2016 in Saas Almagell Switzerland The papers cover a broad range of topics in modern algebraic topology including the theory of highly structured ring spectra infinity categories and Segal spaces equivariant homotopy theory algebraic theory and topological cyclic periodic or Hochschild homology intersection cohomology and symplectic topology     *Alpine Perspectives on Algebraic Topology* Christian Ausoni, Kathryn Hess, Jérôme Scherer, 2009 Contains the proceedings of the Third Arolla Conference on Algebraic Topology which took place in Arolla Switzerland on August 18 24 2008 This title includes research papers on stable homotopy theory the theory of operads localization and algebraic K theory as well as survey papers on the Witten genus and localization techniques     **Homotopy Invariant Algebraic Structures** Jean-Pierre Meyer, 1999 This volume presents the proceedings of the conference held in

honor of J Michael Boardman's 60th birthday It brings into print his classic work on conditionally convergent spectral sequences Over the past 30 years it has become evident that some of the deepest questions in algebra are best understood against the background of homotopy theory Boardman and Vogt's theory of homotopy theoretic algebraic structures and the theory of spectra for example were two benchmark breakthroughs underlying the development of algebraic K theory and the recent advances in the theory of motives The volume begins with short notes by Mac Lane May Stasheff and others on the early and recent history of the subject But the bulk of the volume consists of research papers on topics that have been strongly influenced by Boardman's work Articles give readers a vivid sense of the current state of the theory of homotopy invariant algebraic structures Also included are two major foundational papers by Goerss and Strickland on applications of methods of algebra i e Dieudonné modules and formal schemes to problems of topology Boardman is known for the depth and wit of his ideas This volume is intended to reflect and to celebrate those fine characteristics **American Book Publishing Record** ,2003 *Kochi Journal of Mathematics* ,2016 **Hiroshima Mathematical Journal** ,2011 *Hans Freudenthal* Hans Freudenthal,2009 Hans Freudenthal 1905 1990 was a Dutch mathematician born in Luckenwalde Germany His scientific activities were of a rich variety Enrolling at the University of Berlin as a student in the 1920s he followed in the footsteps of his teachers and became a topologist but with a lively interest in group theory After a long journey through the realm of mathematics working on almost all subjects that drew his interest he turned toward the practical and methodological issues of the didactics of mathematics The present Selecta are devoted to Freudenthal's mathematical oeuvre They contain a selection of his major contributions including his fundamental contributions to topology such as the foundation of the theory of ends in the thesis of 1931 as well as the introduction in 1937 of the suspension and its use in stability results for homotopy groups of spheres In group theory there is work on topological groups of the 1930s and on various aspects of the theory of Lie groups such as a paper on automorphisms of 1941 From the later work of the 1950s and 1960s papers on geometric aspects of Lie theory geometries associated to exceptional groups space problems have been included Freudenthal's versatility is further demonstrated by selections from his foundational and historical work papers on intuitionistic logic and topology a paper on axiomatic geometry reappraising Hilbert's Grundlagen and a paper summarizing his development of Lincos a universal cosmic language **Forthcoming Books** Rose Arny,2004
